RE-MODEL [INTELLIGENCE]

RIHANNA / CLIMATE JUSTICE

From proven community resilience to a global culture of action

Strategic Impact Report + 12-Month Activation Blueprint

STRATEGIC IMPACT REPORT · 28 AUGUST 2026

Prepared by Re-Model Intelligence

DOCUMENT CONTROL / PUBLIC-EVIDENCE EDITION

How to read this report

PUBLIC TRUTH. STRATEGIC JUDGEMENT. CULTURAL INTELLIGENCE.

This report is written for Rihanna and the Clara Lionel Foundation as a decision document. It combines verified public evidence, Re-Model Intelligence analysis, strategic scenarios and a bounded measurement plan. It does not use private Rihanna, CLF, Fenty or platform analytics, a representative fan survey, licensed population-scale social listening or partner interviews.

That boundary does not prevent a substantive strategy. It does determine which conclusions can be defended today. Publicly documented CLF delivery, authoritative climate context and peer-reviewed research establish the foundation. Audience awareness, comprehension, trust and action remain unmeasured until authorised analytics and primary research are available.

Every claim is assigned an evidence state. Reported CLF results are not described as independently assured. Strategic recommendations are not presented as announced programmes. Two synthetic visuals demonstrate future measurement questions and carry a persistent SIMULATED / EXAMPLE ONLY label.

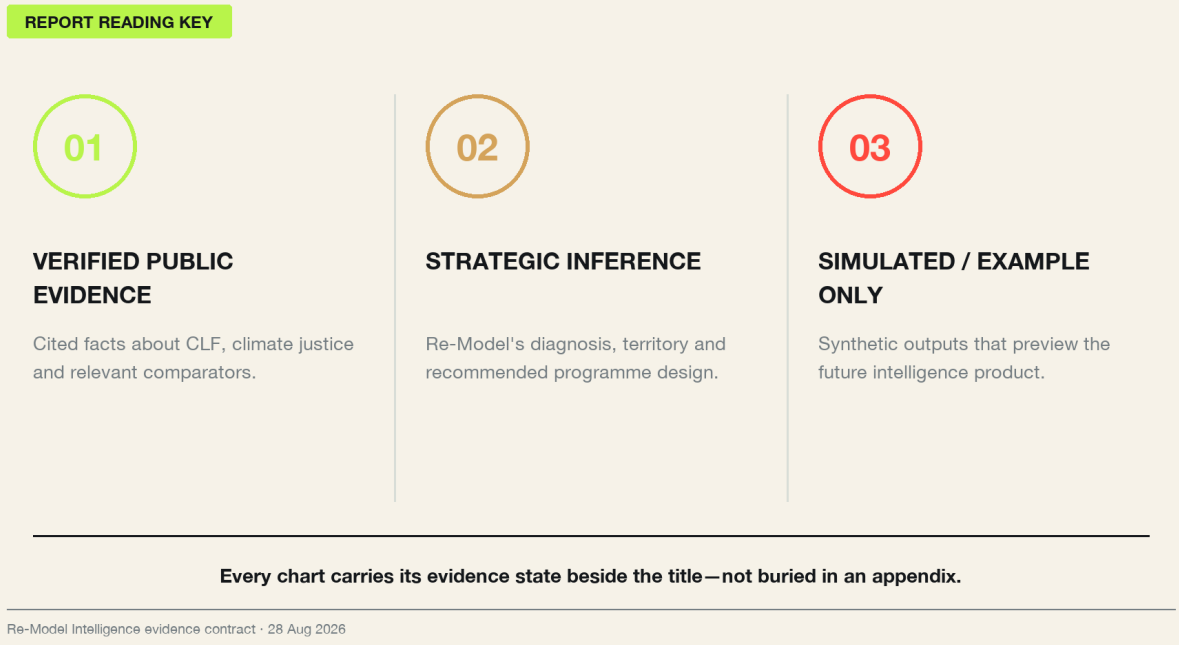

FIGURE / Evidence states used throughout the report.

CONTENTS

The report architecture

The chapters follow Re-Model's operating system from evidence to position, cultural expression, measurement and iteration.

STRATEGIC IMPACT REPORT

EXECUTIVE SUMMARY

The decision in one sentence

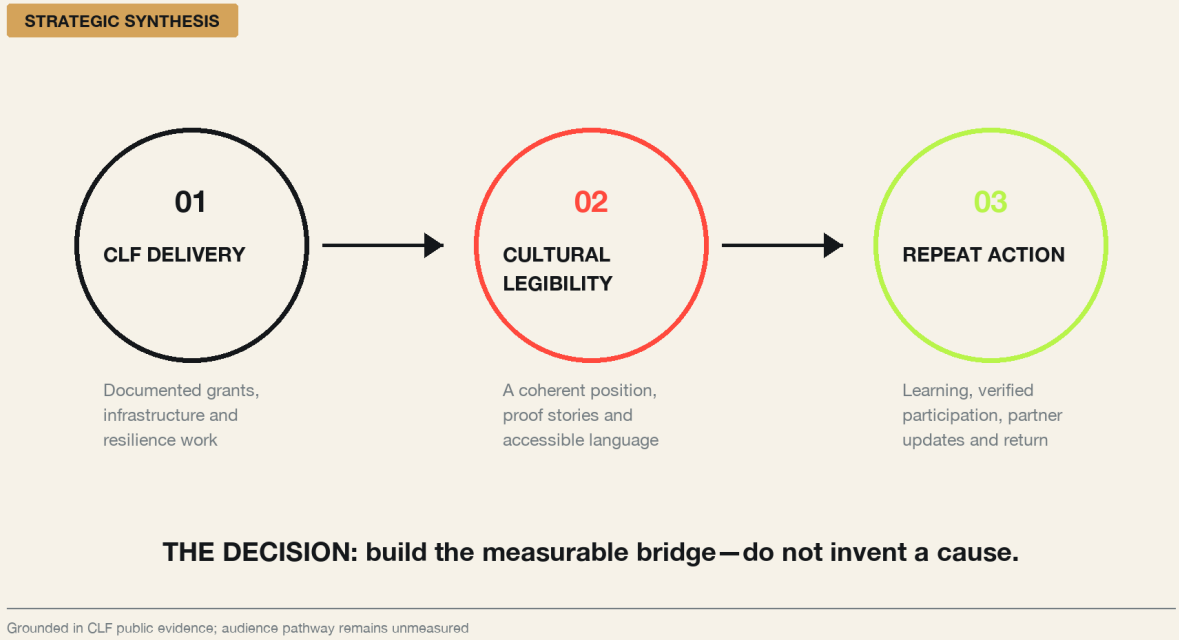

FIGURE / The strategic bridge from documented CLF delivery to cultural legibility and repeat action.

Rihanna should not invent a new climate proposition. She should make CLF's established model of community-led Caribbean resilience visible at cultural scale, then give people a credible pathway from attention to understanding, action, return and leadership.

The opportunity begins with an unusually strong foundation. CLF has a documented climate-solutions portfolio, a multi-year record of flexible funding and infrastructure, and a founder whose Caribbean identity is integral rather than incidental to the cause. Between 2021 and 2025, CLF reports more than $27 million deployed to 39 climate-resilience partners and more than 2.8 million people reached. Its current Climate Solutions page separately reports $20.6 million invested across the Caribbean and U.S. South. Those figures describe different portfolio views and should not be combined; together, they nevertheless establish that this is sustained operating work, not a one-off association.

The central strategic problem is not a lack of credibility. It is a gap between **proof and participation**. Climate justice is expressed through systems that are hard to compress: electricity that stays on, water that remains available, a school designed to become a shelter, a mobile clinic capable of reaching people across an island state, capital controlled closer to communities, and institutions that can continue operating through shocks. Celebrity culture, by contrast, is engineered for immediacy, spectacle and repetition. Without a designed bridge, the work can remain institutionally meaningful yet culturally isolated.

This report recommends building that bridge around CLF's existing **Rebuild & Reimagine** platform. The public proposition is simple: **Built by communities. Backed by culture. Measured in resilience.** The platform would organise proof, community voice, cultural translation, verified action and public accountability into a year-long system. Rihanna's role is not to speak for frontline communities or become the sole protagonist. Her role is to make verified work difficult to ignore, direct attention and resources toward community-defined priorities, and return publicly to what changed.

The proposed **Commercial-to-Climate Pipeline** meets audiences inside behaviours that already exist—music, fashion, beauty, loyalty, sharing and fandom—then redesigns those touchpoints to create learning, partner discovery,

action and repeat participation. Four moves make the pipeline credible: make proof legible; build a return pathway; commission culture as infrastructure; and gate every commercial claim behind auditable evidence and community authority. Concepts such as Fenty Trace, climate-ready Caribbean design and participatory micro-grants are recommended strategic scenarios, not announced programmes.

Measurement is deliberately separated into three different truths. **Talent / CLF** measures delivered evidence, founder–cause authenticity and narrative coherence. **Audience** measures what defined cohorts know, understand, trust and do. **Target** defines the agreed future state and the evidence thresholds required to claim progress. Public evidence supports a strong qualitative Talent / CLF position. The audience position is currently unmeasured. The target is a strategic scenario. No responsible report can turn followers, likes or synthetic examples into a defensible audience score.

The first 90 days therefore combine evidence governance with audience research. CLF and delivery partners would validate proof stories, project baselines, narrative consent and priority outcomes. Authorised owned-channel data, a permission-based survey, stakeholder interviews and a licensed listening pilot—only where it closes a named evidence gap—would establish the baseline. Digital-twin modelling may then stress-test messages and content routes before live investment, but synthetic outputs remain decision support and must be validated with real people.

The near-term decision is whether to authorise a Year One design phase around Rebuild & Reimagine. Approval should be conditional on five commitments: community authority over story and programme relevance; a baseline before numeric audience claims; a public evidence dictionary; a commercial-claim gate; and a year-end accountability moment that reports both progress and unresolved gaps. If those conditions hold, Rihanna can occupy a distinctive global position: not celebrity environmentalism in the abstract, but culture in service of community-led resilience.

Eight findings that shape the strategy

1. **The cause fit is already credible.** Rihanna's Caribbean identity and CLF's sustained portfolio create an authentic foundation that should be clarified rather than reinvented.
2. **The work is practical and systemic at the same time.** Infrastructure, health, water, education, local finance and justice are connected parts of resilience.
3. **The strongest story is not disaster spectacle.** It is everyday continuity: communities able to live, learn, heal and lead before, during and after a shock.
4. **Public proof is dispersed.** The evidence exists across reports, projects and moments but is not yet organised as one persistent cultural journey.
5. **Audience understanding is unknown.** The attention-deficit thesis is strategically plausible, but the 95:5, 12× and 92% examples are synthetic hypotheses—not findings.
6. **Culture can increase efficacy when the action is specific.** Research suggests that collective-efficacy information and strong parasocial ties can improve action intentions; celebrity presence without an actionable pathway is insufficient.
7. **The dashboard must preserve provenance.** Delivery, audience response and strategic destination should never collapse into one unexplained number.
8. **Community power is the credibility test.** A programme is not climate justice if culture or commerce recentres the celebrity and weakens local authority.

The recommended architecture

Re-Model phase	Strategic question	Report output	Living dashboard role
RE-SEARCH	What is true, what matters, and what remains unknown?	Issue system, evidence base, proof portfolio, stakeholder landscape, audience hypotheses	Maintains the evidence register, signal provenance and research health
RE-POSITION	Where can Rihanna create distinctive and defensible value?	Talent / Audience / Target diagnosis, opportunity gap, strategic territory, message system	Tracks position, comprehension, trust and distance to the agreed target

Re-Model phase	Strategic question	Report output	Living dashboard role
RE-CREATE	How does the position become culturally relevant action?	Commercial-to-Climate Pipeline, programme, partnerships, content and halo moment	Monitors participation, partner delivery, activation quality and conversion
RE-ACTION ✦ RE-ITERATE	What changed, what did not, and what should change next?	Impact scorecard, evaluation design, risks, annual account and next-cycle decisions	Publishes the live scorecard, evidence drawer, alerts and learning cadence

The report and dashboard are therefore one system. The report establishes the strategic argument, causal logic, programme and measurement contract. The dashboard carries that contract forward, showing whether the evidence remains healthy and whether the distance between current position and intended impact is actually closing.

STRATEGIC IMPACT REPORT

01 / THE DECISION

Rihanna does not need to manufacture a climate-justice position. Through CLF, she already funds one.

The strategic opportunity is not to invent a cause. It is to make an established body of community-led work more legible, participatory and accountable at cultural scale.

Between 2021 and 2025, CLF reports deploying more than $27 million to 39 climate-resilience partners and reaching more than 2.8 million people through clean energy, health systems, environmental justice and community organising. Its current Climate Solutions page reports $20.6 million invested specifically in climate solutions across the Caribbean and U.S. South. The foundation's latest operating model visibly joins long-term adaptation, emergency response, local leadership and strategic partnership. CLF 2025 Annual Report; CLF Climate Solutions

These are parallel CLF-reported portfolio views with different apparent scopes and periods. They must not be added or treated as reconciled. The separate 5.2 million figure in CLF's 2025 report is organisation-wide 2025 reach, not a climate-only figure.

CLF provides documented delivery credibility. Rihanna's global cultural reach is a strategic premise in this public-evidence edition; it is not quantified here. Our directional diagnosis is that the public evidence and the audience-action pathway are not yet joined into one measurable system: a narrative and action layer that helps audiences understand what climate justice means, see what it looks like in practice, take a meaningful role, and return to act again.

Executive thesis

Build one visible, annual platform around CLF's existing "Rebuild & Reimagine" work. Use culture to convert attention into repeat action, while Caribbean communities retain decision power. Measure three different things separately: what CLF and partners deliver, what audiences understand and do, and what wider capital or policy the cultural platform helps mobilise.

The recommended territory

REBUILD & REIMAGINE Built by communities. Backed by culture. Measured in resilience.

This is not a new foundation proposition. It is a cultural and measurement layer for CLF's existing Rebuild & Reimagine Fund, which currently focuses on health access, water security and resilient education infrastructure. CLF 2025 Annual Report

The ambition

Move from:

- significant work that is credible but unevenly visible;
- high-profile moments without a persistent audience pathway;
- aggregate impact reporting without a shared cultural scorecard;

to:

- a recognisable Rihanna × climate-justice position;
- a year-long ladder from attention to learning, action and repeat participation;
- partner-owned proof of resilience, justice and mobilisation;
- one annual cultural moment that publishes receipts, renews commitments and compounds action.

STRATEGIC IMPACT REPORT

02 / WHAT IS TRUE — AND WHAT IS NOT YET KNOWN

Verified foundation

1. **CLF has a current climate-solutions strategy.** It explicitly prioritises long-term adaptation, emergency response, community leadership and strategic partnerships. **VERIFIED.** CLF Climate Solutions
2. **CLF has meaningful delivery scale.** Its 2025 report states that it invested $4.8 million across 38 grantee partners, reached 5.2 million people across its portfolio and helped grantee partners leverage $7.25 for every $1 CLF invested. **REPORTED; high relevance, not independently assured here.** CLF 2025 Annual Report
3. **Its climate portfolio is infrastructure-linked and described by CLF as community-led.** Current examples include a solar-powered mobile clinic in St. Vincent and the Grenadines, resilient school and shelter infrastructure in Jamaica, water security, clean energy and flexible locally rooted funding. CLF documents participatory examples; portfolio-wide decision power and comparative durability were not independently evaluated in this review. **REPORTED BY CLF.** CLF 2025 Annual Report
4. **FY2024 balance-sheet scale is publicly visible.** IRS-derived data show $24.0 million revenue, $6.6 million expenses and $65.0 million net assets; Rihanna reported $0 founder compensation. **PUBLIC RECORD.** Any inference about deployable programme capacity requires current restrictions, liquidity and commitments. ProPublica Nonprofit Explorer
5. **Rihanna has explicitly articulated the justice frame.** In January 2022, CLF announced approximately $15 million for 18 organisations; its 2022 annual report later reports $15 million committed to 19 organisations during the pillar's inaugural year. The difference may reflect timing or scope and is not reconciled here. **CLF-REPORTED.** CLF-issued announcement; CLF 2022 Annual Report
6. **CLF already links culture, commerce and philanthropy—but not yet as a measured climate pipeline.** Its current site says 35% of selected Fenty product sales goes directly to CLF, and its 2025 supporter list names Fenty Beauty, Fenty Skin and Savage X Fenty as anchor donors. **VERIFIED as a current relationship; no product-level climate claim is inferred.** CLF Home; CLF 2025 Annual Report

Material unknowns

1. What percentage of Rihanna's global audience recognises her climate-justice work? **UNMEASURED.**
2. Which parts of the work audiences understand: disaster response, resilience, infrastructure, justice, local leadership or policy? **UNMEASURED.**
3. Whether recognition varies by country, age, platform, fan intensity or Fenty/customer relationship. **UNMEASURED.**
4. What messages increase comprehension without reducing the issue to celebrity or consumption. **UNMEASURED.**
5. What proportion of attention converts to a verified action, and what proportion acts again. **UNMEASURED.**
6. Whether any cultural activation causes wider donations, partner funding, policy change or commercial uplift. **UNMEASURED until a suitable design exists.**

Hypotheses retained for demonstration—not findings

Three synthetic outputs—a 95:5 entertainment-to-climate engagement ratio, a twelvefold "R9" spike and a 92% conversation drop after 48 hours—illustrate questions a live intelligence system could test: topic imbalance, cultural-keyword competition and the decay of cause-related attention. They are not findings, have no validated population, query, denominator or observation period, and are excluded from the evidence base.

Where they appear in this edition, the entire visual is marked **SIMULATED / EXAMPLE ONLY**. The measured client edition would replace them with authorised platform analytics, licensed listening and/or primary audience research.

STRATEGIC IMPACT REPORT

03 / WHY CLIMATE JUSTICE, WHY THE CARIBBEAN, WHY NOW

FIGURE / Caribbean climate exposure and financing context.

Climate justice is not simply climate communication with a social theme. It asks who created the least pollution, who carries the greatest risk, who controls finance and decisions, and who benefits from adaptation.

Small Island Developing States are among the world's most exposed countries. The World Bank records 185 tropical-cyclone disasters across Caribbean SIDS from 1995 to 2022, causing $45 billion in damage in 2022 prices. In some island states, annual public investment requirements for adaptation are measured in material shares of GDP. World Bank: SIDS by the numbers

The financing imbalance is structural. UN Trade and Development reported that aid to SIDS fell 13% to $5.9 billion in 2022, while climate-related aid fell 23% to $1.5 billion. Natural-hazard damage in the Caribbean is estimated at $12.6 billion a year, and loan-heavy finance risks deepening a debt–climate trap. United Nations in the Caribbean

One storm can overwhelm national finances. The World Bank reports that Hurricane Beryl caused damage equivalent to more than 20% of GDP in St. Vincent and the Grenadines; rapid-access financing and debt clauses were needed to create recovery space. World Bank Crisis Toolkit

Implication

The credible Rihanna position is not "save the planet." It is more precise:

> *Communities that contributed least to the crisis should have the power, infrastructure and finance to live, learn, heal and lead through it.*

That position is globally relevant and distinctly grounded in Rihanna's Caribbean identity and CLF's operating history.

STRATEGIC IMPACT REPORT

04 / THE CLF OPERATING MODEL

Four forms of climate justice already visible in the portfolio

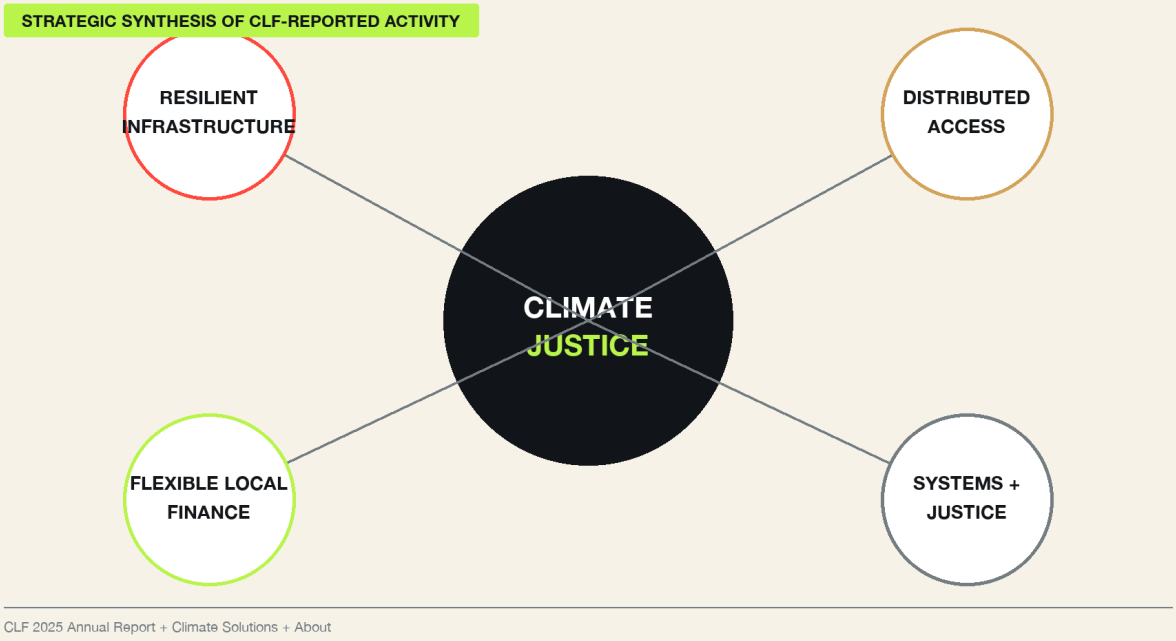

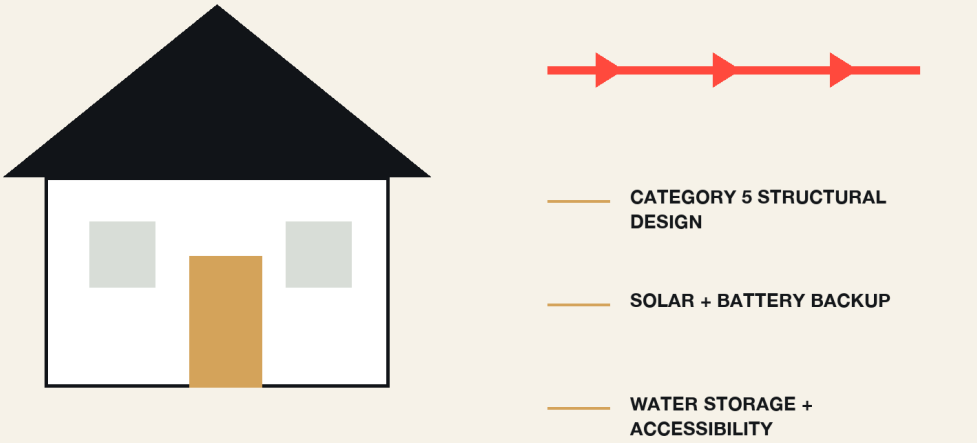

FIGURE / Four connected forms of climate justice visible in CLF's public portfolio.

1. Resilient everyday infrastructure

CLF-REPORTED INTERVENTION

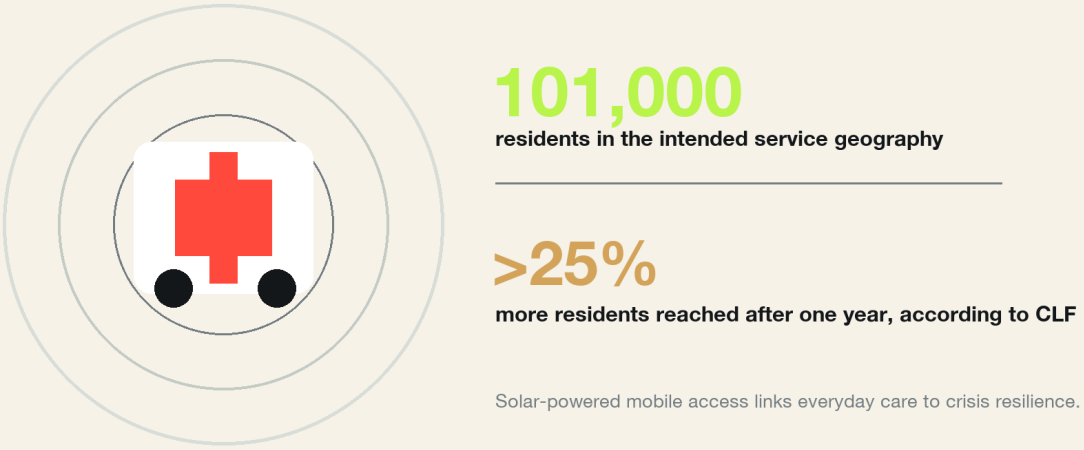

CLF Climate Solutions · no invented completion or outcome value

FIGURE / Hopewell Primary School as everyday learning infrastructure and a designated storm shelter.

Schools, clinics, electricity, water and communications should work in ordinary life and remain useful through a shock. Hopewell Primary School is being developed as both a learning environment and hurricane shelter, with storm-resistant infrastructure, reliable electricity and clean water. **REPORTED.** CLF 2025 Annual Report

2. Mobile and distributed access

CLF-REPORTED RESULT

CLF 2025 Annual Report · baseline, visits and unique patients require verification

FIGURE / Solar-powered mobile health access in St. Vincent and the Grenadines.

The Eastern Caribbean's first solar-powered mobile clinic is designed to reach all 101,000 residents of St. Vincent and the Grenadines. CLF reports that the clinic enabled its partner to reach more than 25% more residents after a year. **REPORTED.** CLF 2025 Annual Report

3. Locally led, flexible finance

CLF's latest learning summary says flexible funding gives communities room to adapt and that locally rooted solutions create more equitable and durable outcomes. Its Indigenous Health Solutions cohort used participatory grantmaking to shift decision power toward communities. **REPORTED.** CLF 2025 Annual Report

4. Intersectional systems change

The $15 million 2022 funding round supported 18 grassroots organisations across climate justice, Indigenous rights, racial justice, feminist movements, youth leadership and just transition. **CORROBORATED.** Global Citizen

Strategic interpretation

CLF's differentiator is not celebrity philanthropy at scale alone. It is the combination of:

- Caribbean focus;
- community leadership;
- practical resilience infrastructure;
- health, education and justice as connected systems;
- flexible capital and partner capacity;
- a founder with exceptional cultural reach.

The strongest future platform should reveal and compound that model, not replace it with a generic awareness campaign.

STRATEGIC IMPACT REPORT

05 / PROOF PORTFOLIO

Evidence that can be shown now

FIGURE / Selected CLF-reported portfolio evidence, shown as parallel rather than additive views.

Proof point	Current evidence	Status	What to verify next
Climate-solutions reach	2.8M people through climate solutions and emergency efforts	Reported	definition, counting period, deduplication
Climate investment	$20.6M across Caribbean and U.S. South	Reported	programme-level reconciliation and period
2021–2025 partner portfolio	>$27M to 39 partners	Reported	portfolio list, grant type, geography
2025 portfolio leverage	$7.25 additional funding per $1 CLF invests	Reported	calculation, attribution, outliers
Mobile clinic	designed for 101,000 residents; >25% more residents reached after one year	Reported	baseline, visits, unique patients, service continuity
Hopewell Primary	school + designated hurricane shelter; electricity and water resilience	In delivery	engineering completion, standards, capacity, uptime
Community leadership	participatory grantmaking and locally rooted partners	Reported	decision-power measure, partner experience, unrestricted share
Resilient infrastructure model	eight major infrastructure projects upgraded over five years across five Caribbean countries	Reported	site list, completion dates, resilience standards and service continuity
Current cause-to-commerce path	35% of selected Fenty sales goes directly to CLF	Reported	eligible products, period, gross/net basis and climate allocation

Sources: CLF 2025 Annual Report; CLF Climate Solutions

What an evidence-led report must not do

- combine portfolio “reach” figures without checking overlap;
- equate investment with impact;
- treat a strategy, facility or grant as an outcome before it is delivered;
- imply that audience attention caused a partner result without a causal design;
- substitute sentiment for justice, resilience or service continuity;
- present CLF-reported metrics as independently assured when they are not.

STRATEGIC IMPACT REPORT

06 / POSITION DIAGNOSIS

STRATEGIC INFERENCE — PROVISIONAL DESK-RESEARCH DIAGNOSIS.
Based on reviewed public CLF assets; not a full channel, audience or competitive audit.

Talent / CLF position

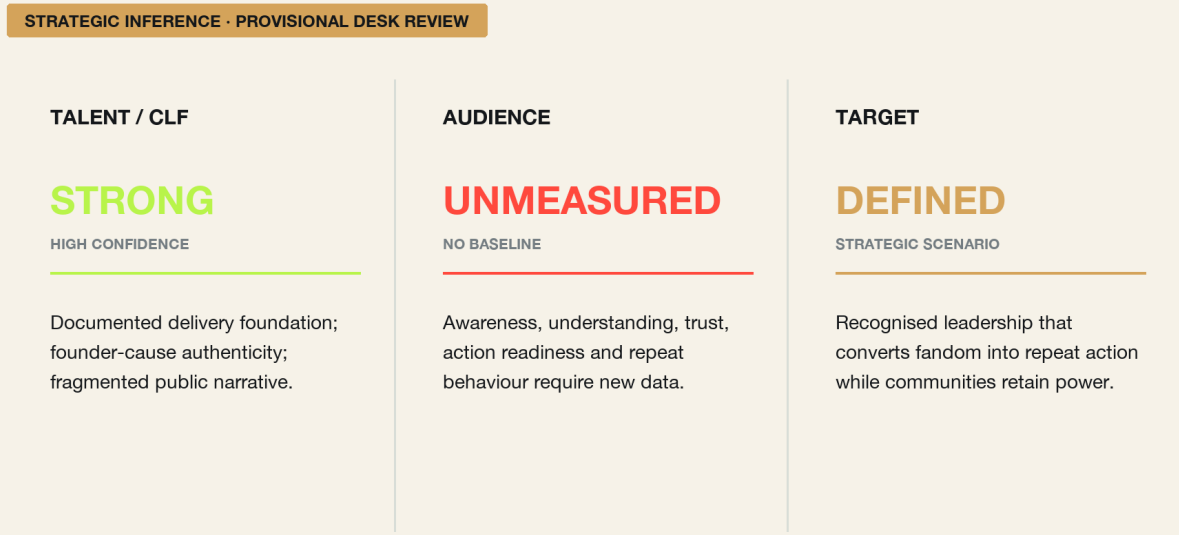

FIGURE / Provisional Talent / Audience / Target diagnosis based on public evidence.

Dimension	Reading	Confidence	Basis
Delivery credibility	**STRONG**	High	multi-year grants, infrastructure, current portfolio evidence
Founder–cause authenticity	**STRONG**	High	Caribbean identity, explicit justice language, sustained CLF role
Distinctive strategic territory	**STRONG**	High	community-led Caribbean resilience is specific and defensible
Public narrative coherence	**DEVELOPING**	Medium	evidence is dispersed across reports, programmes and episodic moments
Audience participation pathway	**EARLY**	Medium	no persistent, visible global fan-action system evidenced in this review
Outcome comparability	**DEVELOPING**	Medium	useful aggregate reporting; limited public baseline and facility-level continuity data

Directional diagnosis: strong documented delivery foundation; public narrative coherence appears fragmented; audience understanding and participation remain unmeasured.

Audience position

Dimension	Reading	Confidence
Awareness of Rihanna's climate work	**UNMEASURED**	None
Understanding of climate justice	**UNMEASURED**	None
Recognition of CLF's community-led model	**UNMEASURED**	None
Trust in Rihanna as a climate-justice voice	**UNMEASURED**	None
Readiness to take a meaningful action	**UNMEASURED**	None
Repeat action and advocacy	**UNMEASURED**	None

Overall: do not infer audience position from followers, likes or synthetic demonstrations. Establish a baseline.

Target position

> *Rihanna is recognised as a verified climate-justice leader whose community-delivered work converts global fandom into repeat, measurable action—while frontline Caribbean partners retain decision power and narrative authority.*

This is a **SCENARIO**, not a current score.

Relationship to the dashboard

The dashboard's current Talent 77%, Audience 86% and Target 97% readings are explicitly labelled as illustrative interface models. This report does not validate those numbers. Until the baseline study is complete, the responsible report reading is:

- **Talent / CLF: Strong, high confidence**
- **Audience: Unmeasured**
- **Target: Defined strategic scenario**

Demonstration scorecard

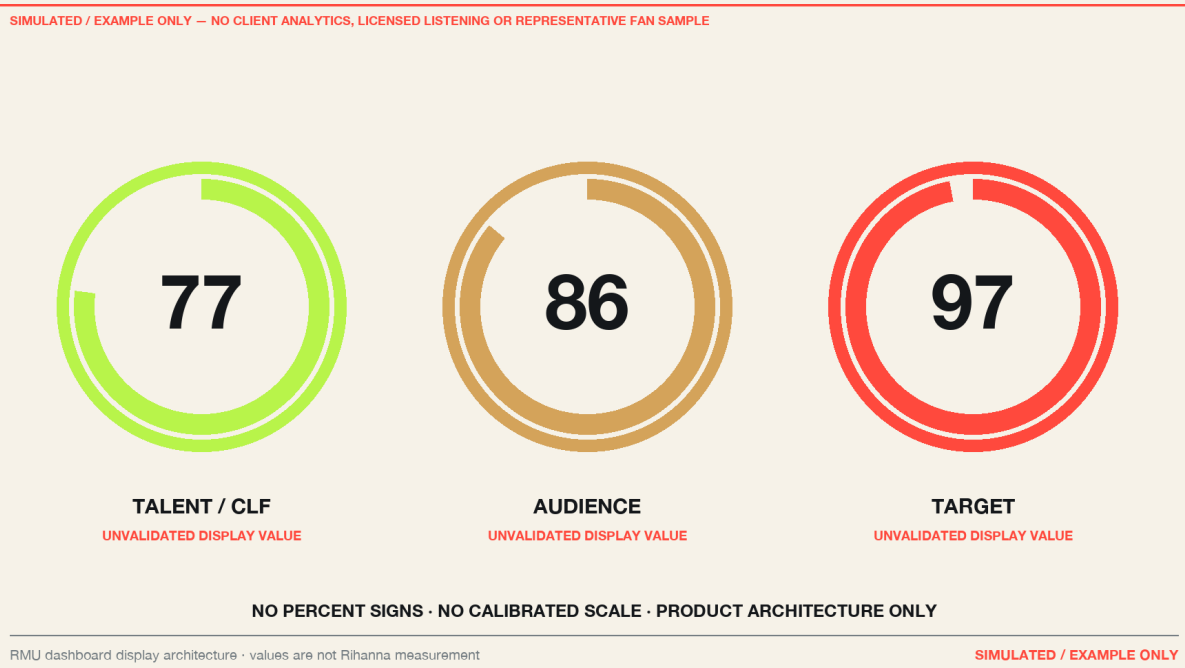

FIGURE / Simulated RMU scorecard architecture; values are not Rihanna measurements.

SIMULATED / EXAMPLE ONLY — PRODUCT ARCHITECTURE, NOT RIHANNA MEASUREMENT

Dashboard panel	Example reading	What the product would eventually measure
Talent / CLF	77	delivery evidence, founder–cause authenticity, narrative coherence and public association
Audience	86	awareness, understanding, trust, action readiness and repeat behaviour in defined cohorts
Target	97	the agreed strategic destination and evidence thresholds

These values reproduce the existing RMU dashboard display logic to demonstrate the intended analytical experience. They are intentionally not presented with a percent sign in this report, because no calibrated scale, weighting system or real baseline has yet been approved.

Example listening visual

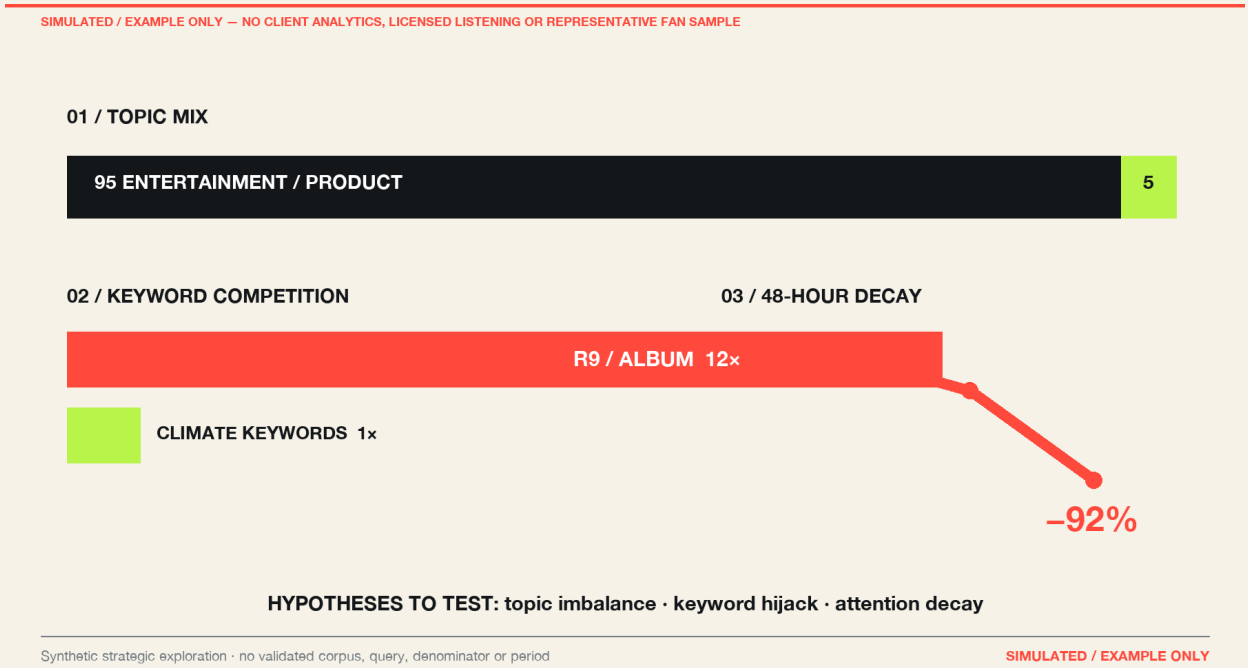

FIGURE / Synthetic listening hypotheses for a future authorised baseline.

SIMULATED / EXAMPLE ONLY — HYPOTHESES TO TEST AFTER DATA AUTHORISATION

- 95:5 entertainment-to-climate conversation split — tests whether climate work is culturally legible.
- 12x "R9" versus climate keyword intensity — tests competition for attention.
- 92% 48-hour decay — tests whether cause attention persists or disappears after an announcement.

The value of the future system is not these example numbers. It is the ability to replace them with reproducible queries, transparent denominators, human-validated interpretation and longitudinal learning.

STRATEGIC IMPACT REPORT

07 / THE OPPORTUNITY GAP

The gap is not “Rihanna versus climate justice.” It is “verified work versus understood and repeated action.”

The structural paradox

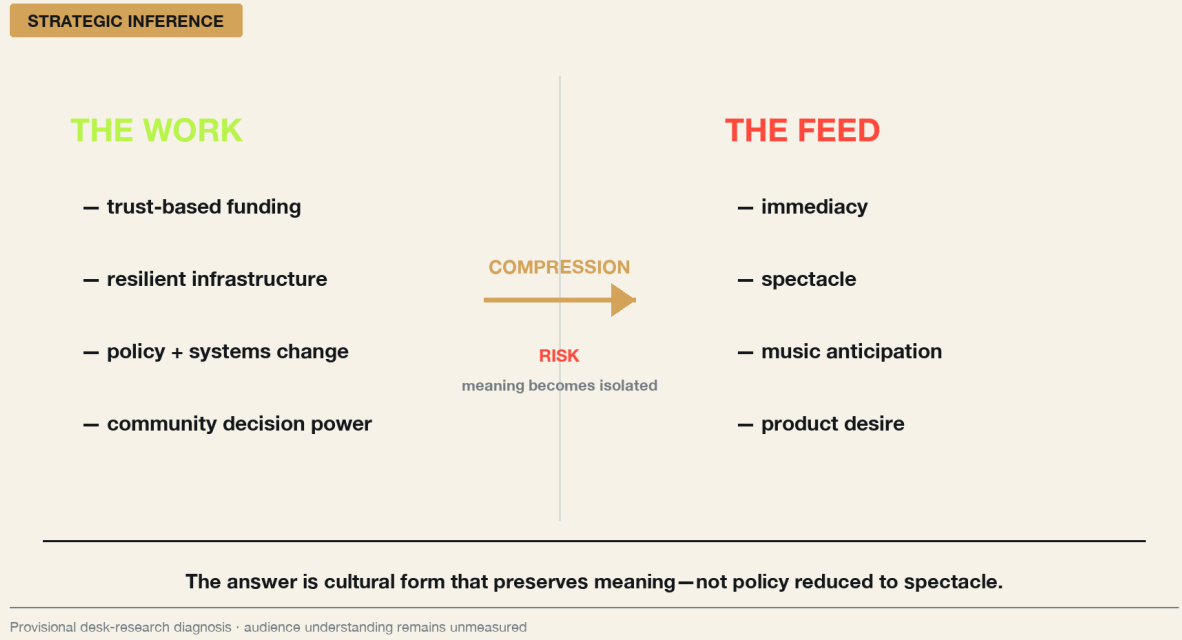

FIGURE / The mismatch between complex climate-justice work and the compression logic of celebrity culture.

CLF champions a progressive, intersectional and trust-based model of climate justice and hurricane resilience. Rihanna's wider cultural ecosystem, by contrast, is built to reward immediacy: music anticipation, beauty and fashion desire, spectacle, memes and product conversation. The risk is that complex foundation work remains institutionally credible but culturally isolated from the people most attached to its founder.

That is a **strategic inference**, not a measured verdict on Rihanna's audience. The 95:5, 12x and 92% demonstrations dramatise the possible shape of the problem; they do not prove it. Re-Model's job is to test whether the paradox exists, determine where it is strongest, and design the bridge if it does.

The compression problem

Structural policy work does not naturally compress into a viral loop. A school that doubles as a hurricane shelter, a mobile clinic that extends resilient healthcare or flexible funding that shifts decision power all require context. If the work is communicated only as an announcement, attention may spike and disappear without producing comprehension or action.

The answer is not to trivialise policy. It is to create cultural forms that preserve meaning while making the issue easier to enter, remember and act on.

What the evidence says about celebrity, efficacy and action

Celebrity attention is not a guaranteed bridge to public action. Research on celebrity advocacy repeatedly distinguishes **visibility** from **engagement**: a familiar figure can make an issue easier to notice, yet attention may remain attached to the celebrity rather than the underlying system. That is particularly important for climate justice, where the

meaningful unit of change is rarely an individual consumer choice alone. The creative task is to use familiarity as an entrance while making community actors, collective efficacy and a specific action pathway progressively more visible.

A recent programme of experiments and field research involving 2,960 participants found that climate messages containing collective-efficacy information increased efficacy and action intentions, with stronger effects among people reporting stronger parasocial relationships with the influencer. Repeated exposure reinforced parts of that pathway. The useful implication is not that Rihanna's audience will behave identically; it is that influence becomes more actionable when a message explains what people can do together, why the action matters and how it connects to a real outcome. Human Communication Research

This supports a disciplined role for Rihanna. She can lower the cultural cost of entry, confer attention and make repeated participation desirable. She cannot substitute celebrity identification for issue comprehension or community authority. Each cultural moment should therefore answer four questions in sequence: **What is happening? Who is already leading? What can I do that is proportionate and verifiable? When will I learn what happened next?**

The strategy must also allow for refusal, critique and unequal resonance. Some audiences may distrust celebrity advocacy, reject a commercial pathway or regard global fandom as a distraction from climate finance and policy. Those are not noise to be optimised away. They are inputs into the authenticity and governance tests, and they should remain visible in qualitative analysis rather than being flattened into a favourable sentiment score.

Gap 1 — Visibility

CLF has credible receipts, but they are not yet organised into one persistent public evidence journey.

Gap 2 — Comprehension

Climate justice can remain abstract unless it is shown through real schools, clinics, water systems, local leadership and days of service preserved.

Gap 3 — Participation

Audiences need more than a donation button. They need actions appropriate to their location, capability and stage of commitment.

Gap 4 — Accountability

Reach, engagement, grants and people reached do not by themselves show whether basic services remained available through shocks or communities gained decision power.

Gap 5 — Compounding

An annual halo event should not be a one-night endpoint. It should be the public checkpoint of a year-long programme and the launch of the next cycle.

Re-Model's antidote: the Commercial-to-Climate Pipeline

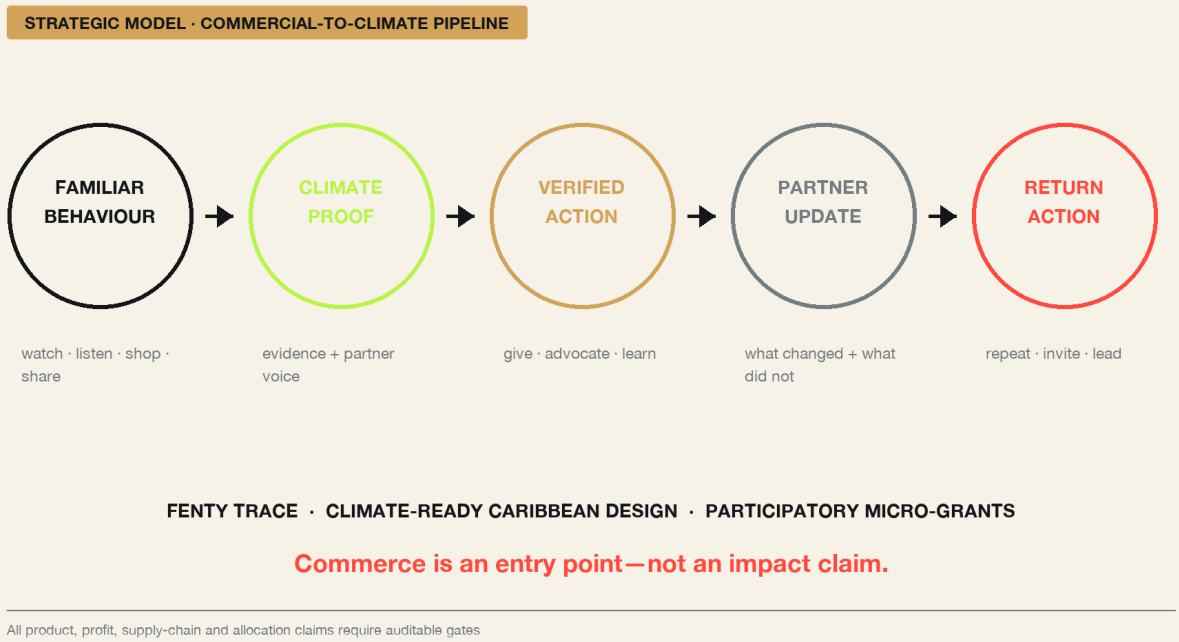

FIGURE / Commercial-to-Climate Pipeline: a route from familiar behaviour to verified action and return.

The pipeline meets audiences inside behaviours that already exist—watching, listening, shopping, sharing, loyalty and fandom—and redesigns those touchpoints to create a route into verified climate learning, community-defined action and repeat participation.

Strategic initiative	Expanded operating concept	Evidence and justice gate	Intended growth mechanism
Fenty Trace	A digital evidence layer connected to selected Fenty touchpoints, showing material and supply-chain claims, the climate-justice issue they relate to, the partner mechanism and a next action	Launch only where product and supply-chain data are auditable; avoid generic offset education or implied whole-brand sustainability claims	Turns product attention into specific learning and evidence-seeking behaviour
Climate-Ready Caribbean Design	Limited, high-design collaborations with Caribbean designers and resilience practitioners, with a defined funding mechanism for partner-approved infrastructure or preparedness priorities	Publish the beneficiary, net contribution, rights, production footprint and decision authority; "100% of profits" only if contractually true and independently reconcilable	Meets fashion interest without treating purchase as sufficient action; creates visibility, income and cultural authorship
Participatory Micro-Grant Pathway	Loyalty members or fans learn about eligible partner-defined projects, complete a meaningful action and help allocate a ring-fenced incremental pool among pre-approved options	CLF and frontline partners set eligibility and retain final authority; participation adds capital rather than overruling existing grants	Converts loyalty into partner discovery, informed participation and return behaviour
Proof-to-Action Releases	Treat selected music, fashion or cultural moments as timed gateways into a partner story, evidence card and action ladder	Every release has named sources, consent, a destination and a post-moment results update	Uses cultural peaks to build a persistent action habit rather than an isolated spike

Pipeline logic

Familiar behaviour → climate proof → community voice → verified action → partner update → repeat action

This is the core design response to the hypothesised attention deficit. It connects commercial and cultural attention to climate justice without claiming that consumption itself is impact.

Pipeline decision gates

The pipeline is not a content funnel in which reach is assumed to become impact. Each transition is a management decision with a minimum proof condition. **Entry** asks whether the cultural or commercial moment is relevant enough to earn attention without distorting the issue. **Translation** asks whether the climate proof is specific, accessible and approved by the people whose work is being represented. **Action** asks whether a participant can do something proportionate and verifiable beyond passive engagement. **Return** asks whether the programme can report what happened, what remains unresolved and what the audience should do next.

Every proposed activation should therefore carry a one-page pathway brief before approval: the originating audience behaviour; the named partner and community benefit; the evidence available at launch; the intended audience action; the data that may ethically be collected; the follow-up commitment; and the accountable owner. If any link is absent, the activation remains an awareness output rather than a Rebuild & Reimagine pathway.

This discipline protects the strategy from two common failures. The first is **attention leakage**, where a large cultural moment generates views but leaves no durable route into knowledge or action. The second is **impact substitution**, where a commercial transaction, post or pledge is reported as though it were community resilience. The dashboard should expose both failures: it should show movement between stages, not merely activity at the top of the funnel, and it should never convert an audience signal into an outcome claim without separate programme evidence.

STRATEGIC IMPACT REPORT

08 / COMPARATOR LESSONS

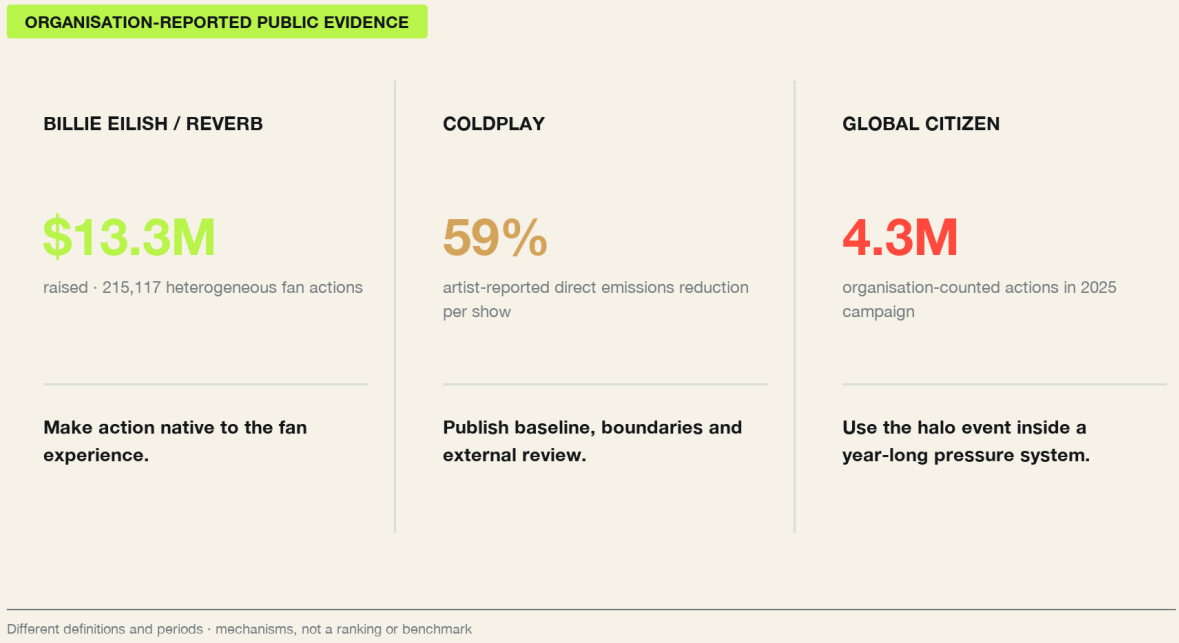

FIGURE / Comparator mechanisms that convert cultural attention into action and accountability.

Comparator outputs use different periods, definitions and boundaries. They demonstrate mechanisms, not relative performance, and must not be ranked against Rihanna/CLF.

Billie Eilish × REVERB — make action native to the fan experience

REVERB reports that Billie Eilish's Hit Me Hard and Soft tour raised $13.3 million for climate and community organisations, counted 215,117 heterogeneous fan actions, hosted more than 160 nonprofits and estimates that programme measures avoided the potential use of more than 135,260 single-use bottles. The model embeds action villages, ticket-linked funding, partner presence and venue operating standards into the experience itself. **Lesson: culture converts when action is easy, specific and physically present.** REVERB impact report

Coldplay — publish a baseline, reduce first, disclose external review

Coldplay reports a 59% show-by-show reduction in direct tour emissions against its prior stadium tour, with analysis overseen by Hope Solutions and reviewed by a professor associated with MIT's Environmental Solutions Initiative. The artist discloses boundaries, including the exclusion of fan travel; this is not treated here as a published independent assurance opinion. **Lesson: credibility rises when the baseline, boundary, method and external review are visible.** Coldplay Tour Emissions Update

Global Citizen — connect cultural attention to decision-makers and commitments

Global Citizen's 2025 festival campaign reports 4.3 million organisation-counted actions and uses a year-long policy campaign, action-earned tickets and an annual cultural moment to press governments and companies for

commitments. These are not necessarily unique people or outcomes, and commitments remain separate from delivery. **Lesson: the halo event works best as a pressure and accountability point inside a longer campaign.** Global Citizen Festival 2025 Impact

Provisional Rihanna / CLF strategic white space

This is directional, based on a selective comparator set rather than an exhaustive market audit. Rihanna should not imitate sustainable touring or a generic petition platform. Her differentiated territory is **community-led resilience in the Caribbean and U.S. South**, with culture used to reveal infrastructure, justice, leadership and finance that already exist.

STRATEGIC IMPACT REPORT

09 / STRATEGIC TERRITORY

FIGURE / Recommended Rebuild & Reimagine strategic territory.

REBUILD & REIMAGINE

Promise

Climate justice is what happens when communities have the power and infrastructure to keep learning, healing and living through a changing climate.

Line

Built by communities. Backed by culture. Measured in resilience.

Four principles

1. **Community authority** — partners define need, solution, consent and story.
2. **Receipts before rhetoric** — every story connects to a named action and evidence status.
3. **Everyday resilience** — show value before, during and after a disaster.
4. **Culture as multiplier** — Rihanna's role is to make verified work visible, desirable to support and hard to ignore.

Narrative structure

- **What is at risk?** Schools, clinics, water, energy, livelihoods and cultural continuity.
- **Who leads?** Local and Indigenous organisations, public systems and frontline communities.
- **What changes?** Infrastructure, flexible finance, service continuity and decision power.
- **What can I do?** Learn, share accurately, give, volunteer, advocate, buy only where there is a verified cause-to-commerce mechanism, and act again.

Message guardrail

Rihanna is not "giving communities a voice." Communities already have voices. The platform gives those voices reach, resources and leverage.

Alternatives considered—and why they are weaker

A broad sustainability platform would offer topical breadth but dilute Rihanna's founder–cause authenticity and duplicate territory already occupied by many artists and brands. It would also invite product-footprint claims that cannot be defended from the public evidence available here.

A disaster-response-only platform would be emotionally immediate but episodic. It risks turning Caribbean communities into scenes of crisis while obscuring the slower work of preparedness, infrastructure, health access, local finance and everyday continuity.

A donation-led celebrity campaign could move money quickly but would leave the central audience problem unresolved: whether people understand climate justice, recognise local leadership, return to act and support systemic change. Donation is one rung of the action ladder, not the organising idea.

A product-first climate proposition would meet audiences inside commerce but place the highest-evidence burden on the least mature part of the strategy. Without audited product, supply-chain and allocation data, it creates more reputational risk than strategic value. Commerce is therefore a gated pathway inside Rebuild & Reimagine—not the definition of the platform.

Four connected strategic moves

1. Make the proof legible

Create a persistent Rebuild & Reimagine evidence hub that connects every public story to a place, partner, intervention, evidence status and next action.

2. Turn fandom into a return pathway

Build a tiered action journey that moves people from seeing and learning to verified action, return behaviour and partner-defined leadership. Fans may help direct attention or participate among partner-approved choices; they should not overrule frontline grant decisions.

3. Commission culture as infrastructure

Fund Caribbean creators, filmmakers, educators and cultural institutions to translate community-defined priorities into work with reach, memory and local value. The annual halo moment should be a public accountability checkpoint, not a one-night substitute for programme delivery.

This builds on an existing CLF premise: its Arts & Culture work explicitly treats creativity as a force for healing, resilience and systems change, and its 2025 report identifies amplification of creative voices as a forward priority. CLF About; CLF 2025 Annual Report

4. Gate commerce behind proof

Explore a Fenty-facing evidence or traceability layer only after product, supply-chain and cause-to-commerce claims have auditable boundaries. Until then, treat Fenty participation as philanthropy, distribution or matched funding—not evidence of product sustainability.

What must be true before launch

Rebuild & Reimagine should advance only when five conditions are met. First, the participating community or delivery partner has approved the need, proposed benefit, public narrative and consent process. Second, the intervention has a defined baseline and a result that can be measured without imposing disproportionate reporting work on the partner. Third, the audience pathway names a real action and a return moment; awareness alone is not presented as transformation. Fourth, any commercial contribution has a reconciled calculation, a transfer schedule and language that distinguishes revenue, profit, donation and programme expenditure. Fifth, the public evidence card identifies what is reported, what is independently verified, what remains provisional and who owns the underlying data.

These conditions turn the territory from a campaign idea into a governable strategic platform. They also create a clear **no-go** rule: if a launch depends on an environmental claim that cannot be audited, a community story that has not been consented, or an impact number that cannot be traced to an owner and period, it does not launch under the Rebuild & Reimagine name. Scarcity is preferable to weak proof. The platform earns cultural authority through the quality of what it can stand behind, not the volume of material it publishes.

STRATEGIC IMPACT REPORT

10 / THEORY OF CHANGE

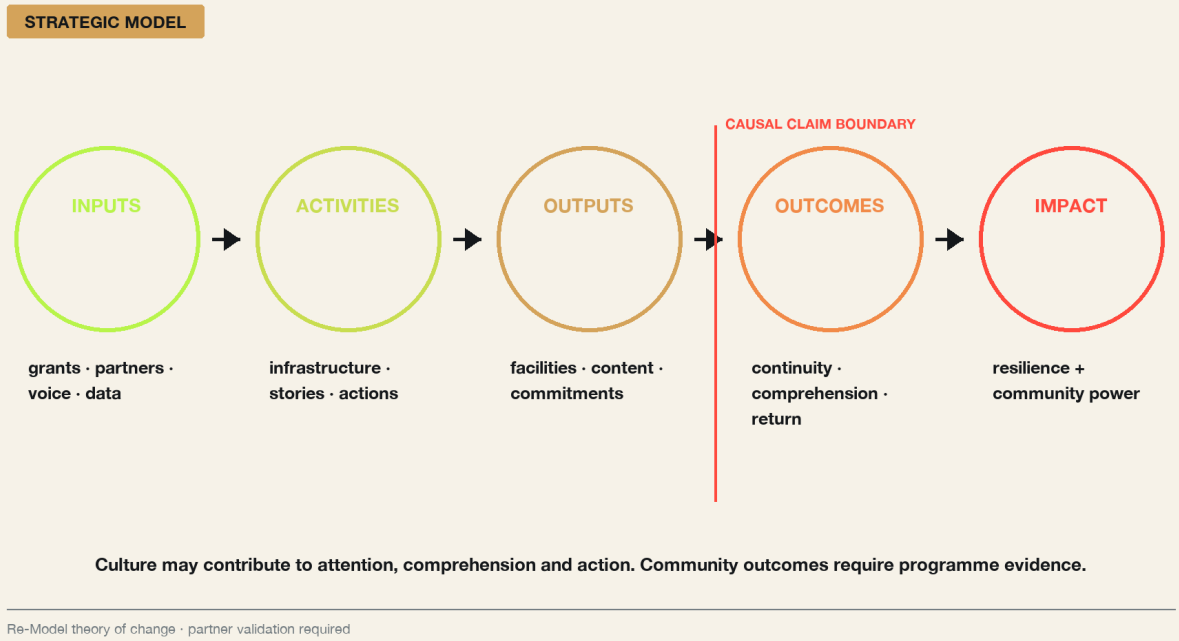

FIGURE / The proposed results chain and its causal boundary.

If

CLF and community partners publish accessible evidence of locally led resilience work;

and if

Rihanna uses sustained, first-person cultural storytelling to give that work attention and a clear action pathway;

and if

fans, brands, institutions and governments can take appropriately designed actions with transparent follow-through;

then

more people will understand climate justice, more resources and influence can move toward frontline organisations, and resilience outcomes can be tracked without confusing cultural attention with community impact.

Results chain

Inputs grants · staff · partners · Rihanna voice · creative production · data systems

Activities resilience infrastructure · flexible funding · storytelling · education · fan actions · convening · advocacy

Outputs facilities upgraded · partners funded · stories published · actions completed · commitments secured

Outcomes services remain available · partner capacity grows · audience comprehension rises · repeat action increases · more capital is mobilised

Impact communities are more resilient and exercise greater power over climate decisions and resources

Causal discipline

The cultural campaign can reasonably claim contribution to attention, comprehension, verified actions and mobilised commitments. It should not claim responsibility for community resilience outcomes unless a suitable contribution or evaluation design supports that conclusion.

STRATEGIC IMPACT REPORT

11 / 12-MONTH PROGRAMME

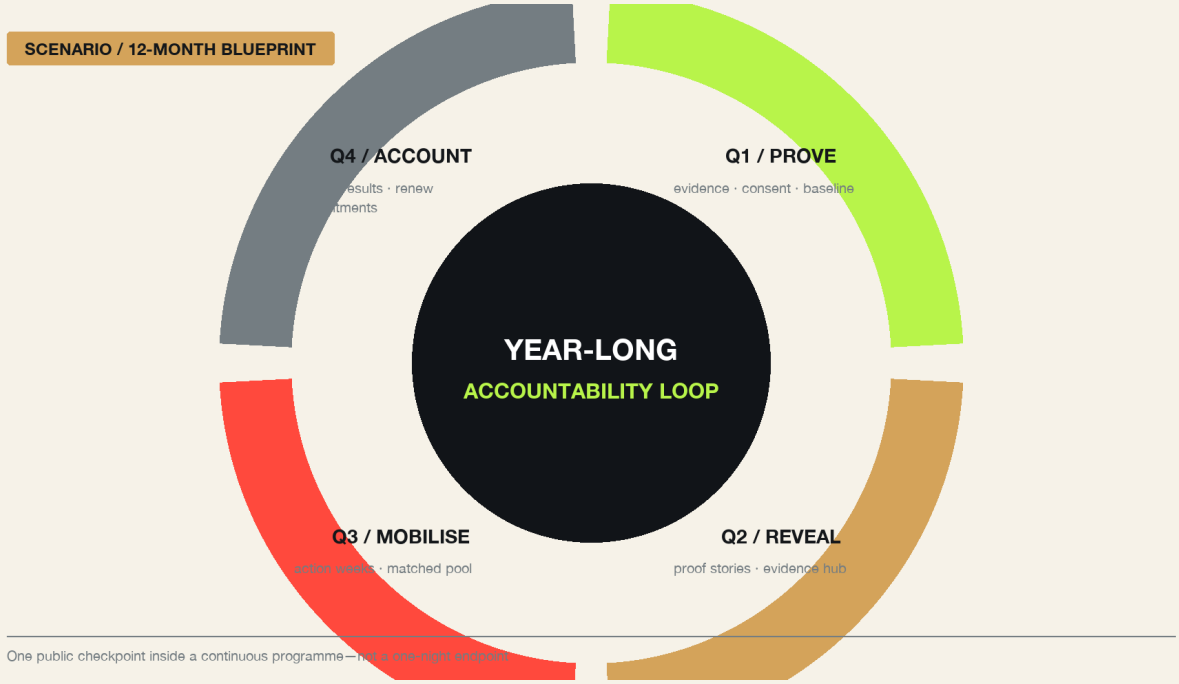

FIGURE / Proposed twelve-month programme from proof to public accountability.

Quarter 1 — PROVE

Objective

Create the evidence, consent and baseline infrastructure before the public campaign.

Work

- establish partner story and data consent;
- define the KPI dictionary and source ledger;
- reconcile CLF portfolio and project data;
- collect authorised Rihanna, CLF and Fenty owned-channel analytics;
- run an initial audience baseline;
- code a 300–500-item qualitative sample obtained through authorised account exports, a contractually licensed provider, or another lawful terms-compliant method, following privacy review;
- select three hero proof stories: school/shelter, mobile clinic, water or community-led finance;
- commission independent measurement review for the relevant programme metrics.

Gate

No headline percentage appears without a definition, denominator, period and source.

Quarter 2 — REVEAL

Objective

Make climate justice concrete and establish the position.

Work

- Rihanna founder film or essay in first person;
- three partner-led short films and evidence cards;
- public Rebuild & Reimagine evidence hub;
- action ladder by geography and commitment level;
- creator and educator toolkit;
- earned-media briefing using verified facts only.

Gate

Partner voice leads programme stories; Rihanna provides attention and accountability.

Quarter 3 — MOBILISE

Objective

Move from comprehension to repeated action and wider commitments.

Work

- community partner action weeks;
- matched giving to a ring-fenced pool governed by CLF and local partners;
- policy or institutional asks selected with frontline partners;
- local creator fellowships and cultural commissions;
- optional Fenty participation only through a defined, audited mechanism;
- monthly signal-health review and message iteration.

Gate

Do not use fans to overrule community grant decisions. Participation should add resources and pressure, not transfer power away from partners.

Quarter 4 — ACCOUNT ✦ REIMAGINE

Objective

Turn the annual halo moment into a public accountability checkpoint.

Work

- Rebuild & Reimagine cultural event in or led from the Caribbean;
- project and partner showcase;
- public release of year-one results and limitations;
- donor, brand and government commitments for the next cycle;
- Year Two target and programme reveal;
- independent review of selected indicators.

Gate

The event reports what happened, what did not, what changed and what will happen next.

STRATEGIC IMPACT REPORT

12 / THE ACTION LADDER

SCENARIO / PROPOSED PROGRAMME

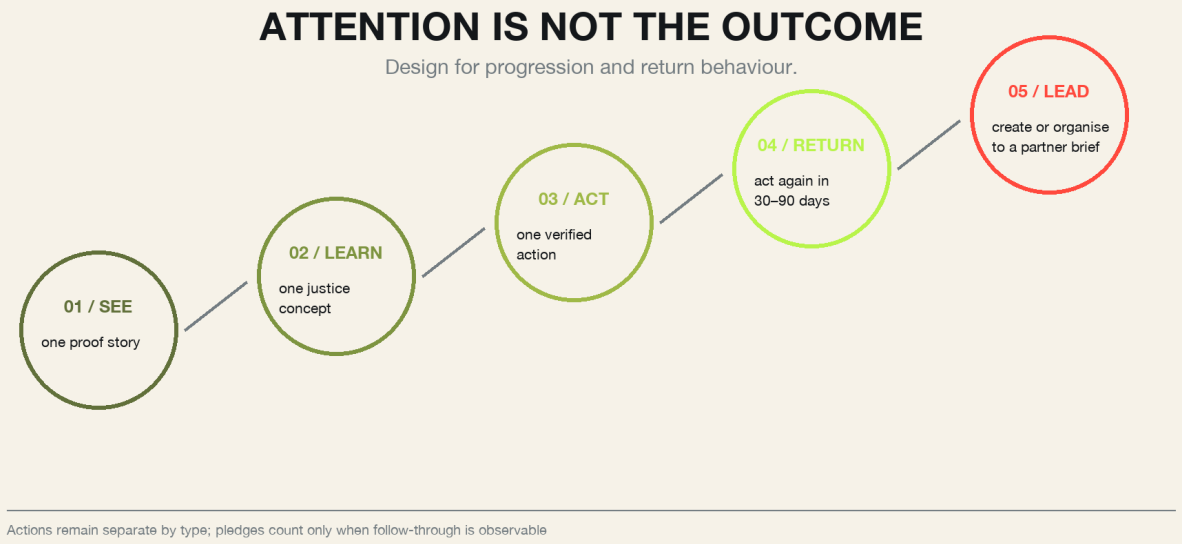

FIGURE / Participation ladder from attention to partner-defined leadership.

Attention is not the outcome. Design for progression.

Level 1 — SEE

Watch a partner story; view a project evidence card; understand one climate-justice concept.

Level 2 — LEARN

Complete a short learning sequence; identify why impacts and finance are unequal; choose a local or regional pathway.

Level 3 — ACT

Donate, volunteer, contact a decision-maker, join a verified partner action or support an approved local programme.

Level 4 — RETURN

Complete a second action in 30–90 days; receive a project update; invite another person into the pathway.

Level 5 — LEAD

Host, fundraise, create, organise or advocate with a partner-defined brief.

Quality rules

- An action must have a named beneficiary or decision target.
- A pledge is not counted as behaviour unless follow-through is observable.
- Donation, advocacy, volunteering and learning are reported separately.

- Repeat action matters more than total clicks.
- Negative, critical and dissenting responses remain in the analysis.

A field experiment involving 1,560 Vietnamese university-dorm participants found that information shifted attitudes, while a local-celebrity endorsement condition also affected single-use-plastic behaviour for approximately one month. This supports testing specific, observable behaviours rather than awareness alone. The population, culture, celebrity and behaviour differ materially from this strategy; the result is not a Rihanna or climate-justice forecast. Journal of Economic Behavior & Organization

STRATEGIC IMPACT REPORT

13 / VOICE AND MESSAGE SYSTEM

Voice

- first person, specific and accountable;
- Caribbean-grounded, not universalising;
- proud and culturally alive, not catastrophe-only;
- concrete about what Rihanna and CLF are doing;
- generous with partner authorship;
- honest about limits and unfinished work.

Across the two cited studies, parasocial relationship, message framing, perceived congruence and authenticity influence attitudes or intentions in context-specific ways. Neither study establishes a general behavioural effect for Rihanna or climate justice. **Implication: show actions, boundaries and partner proof; test messages rather than assuming celebrity identity is sufficient.** Sustainability; Young Consumers

Message territories to test

A. Everyday resilience

“A school should still be a school after the storm.”

B. Unequal burden, shared responsibility

“The communities carrying the greatest climate risk did the least to create it.”

C. Local leadership

“The people closest to the problem are closest to the solution—if the resources reach them.”

D. Culture as infrastructure

“Culture can move attention. We are here to move resources, power and proof.”

These are **SCENARIO** territories for research, not approved campaign copy.

STRATEGIC IMPACT REPORT

14 / PARTNERSHIP ARCHITECTURE

FIGURE / Governance model with community authority at the centre.

Partnership is the operating condition of the strategy, not a campaign embellishment. Climate resilience crosses infrastructure, health, education, utilities, finance, rights, culture and public policy. Rihanna and CLF should therefore act as a convening and amplification layer around organisations with delivery authority, technical expertise and lived knowledge. The system is strongest when each institution does what it is uniquely positioned to do and the programme makes those roles visible.

The governing design separates **authority**, **advice**, **delivery**, **amplification** and **capital**. Community and delivery partners define relevance, consent and benefit. Technical and measurement partners establish standards and evaluate evidence. Cultural partners translate priorities without appropriating them. Institutions and governments change systems or finance infrastructure. Commercial partners may fund, distribute or alter operations, but they do not acquire narrative ownership or beneficiary-selection power.

This architecture also protects small organisations from becoming unpaid evidence suppliers to a global campaign. Reporting requirements should be proportionate, co-designed and funded. Where CLF or Re-Model requires additional data for the dashboard, the budget should include partner time, local research capacity, translation, safeguarding and data stewardship.

Community council

CLF grantees and Caribbean practitioners with authority over programme relevance, story consent and benefit.

Measurement council

CLF, grantee data owners, an independent evaluator, resilience specialists and Re-Model Intelligence.

Culture council

Caribbean artists, filmmakers, designers, educators and youth leaders—not only global celebrities.

Institutional partners

Governments, schools, health systems, utilities, academia, disaster-risk and climate-finance organisations.

Commercial partners

Brands may fund, distribute or change operations. They do not control beneficiary selection or make environmental claims beyond verified boundaries.

Fenty boundary

Fenty Beauty, Fenty Skin and Savage X Fenty are listed as 2025 CLF anchor donors. This supports a real philanthropic relationship. This public review did not locate an assurance-ready Fenty-specific climate footprint or product baseline; that does not establish that no internal baseline exists. Any cause-to-commerce mechanism must be separately defined, audited and approved. CLF 2025 Annual Report

CLF's current website also states that 35% of selected Fenty product sales goes directly to the foundation. That is a real starting point for pipeline design, but the report would still need to establish eligible products, reporting period, gross-versus-net basis, climate allocation and proof of transfer before treating it as a climate-justice result. CLF Home

Partnership selection test

The programme should select partners against six questions before prestige or reach is considered: **authority**—does the organisation have legitimacy with the people affected; **additionality**—does the partnership add capital, capability, access or policy leverage that would not otherwise exist; **evidence fitness**—can the intended result be documented at a proportionate cost; **rights and consent**—are story, image, data and withdrawal rights explicit; **continuity**—is there a plan beyond the public moment; and **independence**—can community partners speak honestly about limits or failure without risking support.

No single partner must satisfy every role. The architecture is intentionally plural: a grassroots organisation may hold community authority, a public agency may control infrastructure, a technical body may validate a standard, and a cultural collaborator may make the work legible. The programme office is responsible for making those dependencies clear and preventing brand visibility from being mistaken for delivery authority.

STRATEGIC IMPACT REPORT

15 / IMPACT SCORECARD

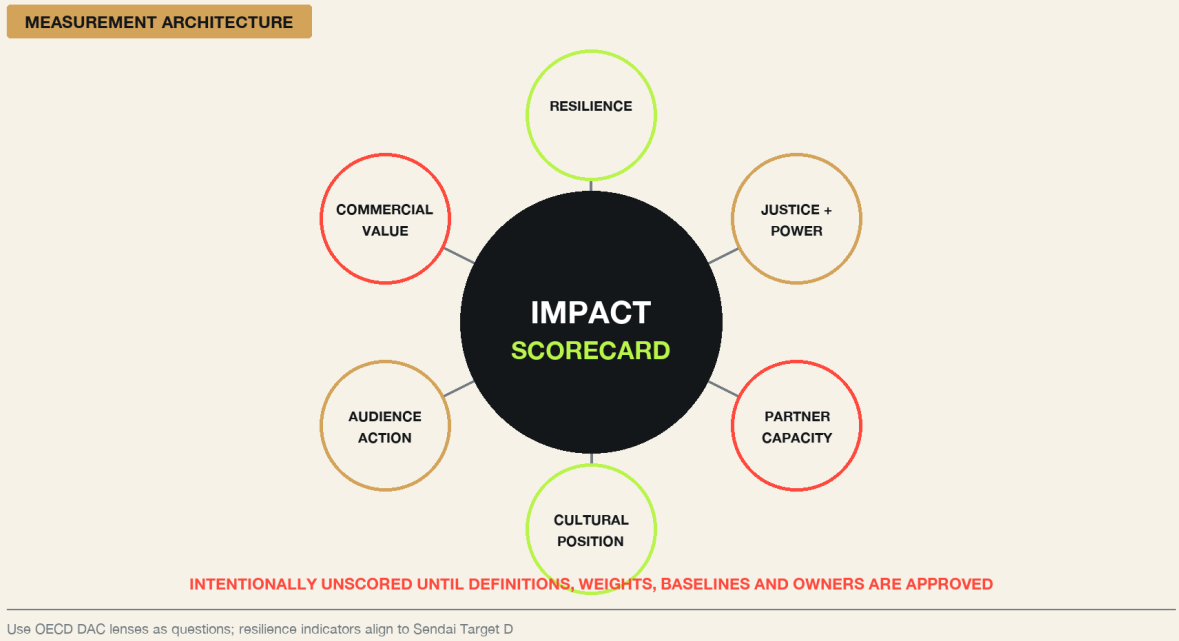

FIGURE / Six scorecard domains kept separate until baselines, definitions and weights are approved.

The scorecard is a decision framework, not a single ranking. It keeps different forms of value visible long enough to prevent a strong cultural result from masking a weak programme result—or a strong programme result from being judged only by social reach. Resilience, justice, partner capacity, cultural position, audience action and commercial value may interact, but their evidence sources, time horizons and ethical stakes are different.

A future composite score should be considered only after the domains, components, weights, baselines and minimum evidence thresholds are approved. Until then, the dashboard should show a profile rather than a verdict. Missing data is a result in its own right and should remain visible.

A. Resilience and service continuity

- days of education disruption after a shock;
- days of health-service disruption after a shock;
- facility uptime for power, water and communications;
- time to reopen or return to agreed service level;
- people served during normal operations and emergency periods;
- damaged or disrupted education and health facilities.

These align naturally with the Sendai Framework's Target D, including damaged health and education facilities and disruptions to health, education and other basic services. UNDRR Sendai monitoring

B. Justice and community power

- percentage of climate funds governed or advised by local partners;
- percentage of funding that is flexible or unrestricted;
- funding to women-, youth-, Black-, Indigenous- and locally led organisations;

- partner reporting burden;
- partner satisfaction and psychological safety;
- number and quality of community decisions adopted;
- capital mobilised directly to partner organisations.

C. Partner and system capacity

- organisations funded and retained;
- partner staff or systems strengthened;
- co-funding leverage with method disclosed;
- government or institutional commitments implemented;
- project maintenance and lifecycle financing secured.

D. Cultural position

- aided and unaided Rihanna × climate-justice association;
- comprehension of the justice frame;
- partner-name recognition;
- trust and authenticity;
- share of relevant conversation, with a transparent query;
- quality of conversation coding;
- geographic and community diversity of visible voices.

E. Audience action

- verified actions by type;
- action completion rate;
- qualified-action rate per 1,000 reached;
- repeat action in 30, 90 and 365 days;
- progression up the action ladder;
- partner-attributable funds or advocacy contacts.

F. Commercial and career value

- relevance, trust and consideration among defined cohorts;
- earned media quality, not only volume;
- partner and talent opportunity created;
- attributed revenue only where a consented and auditable pathway exists;
- long-term career-equity indicators separated from social impact.

Evaluation lenses

Use the OECD DAC criteria—relevance, coherence, effectiveness, efficiency, impact and sustainability—as questions, not as a mechanistic rating system. OECD Evaluation Criteria

STRATEGIC IMPACT REPORT

16 / DASHBOARD CONTRACT

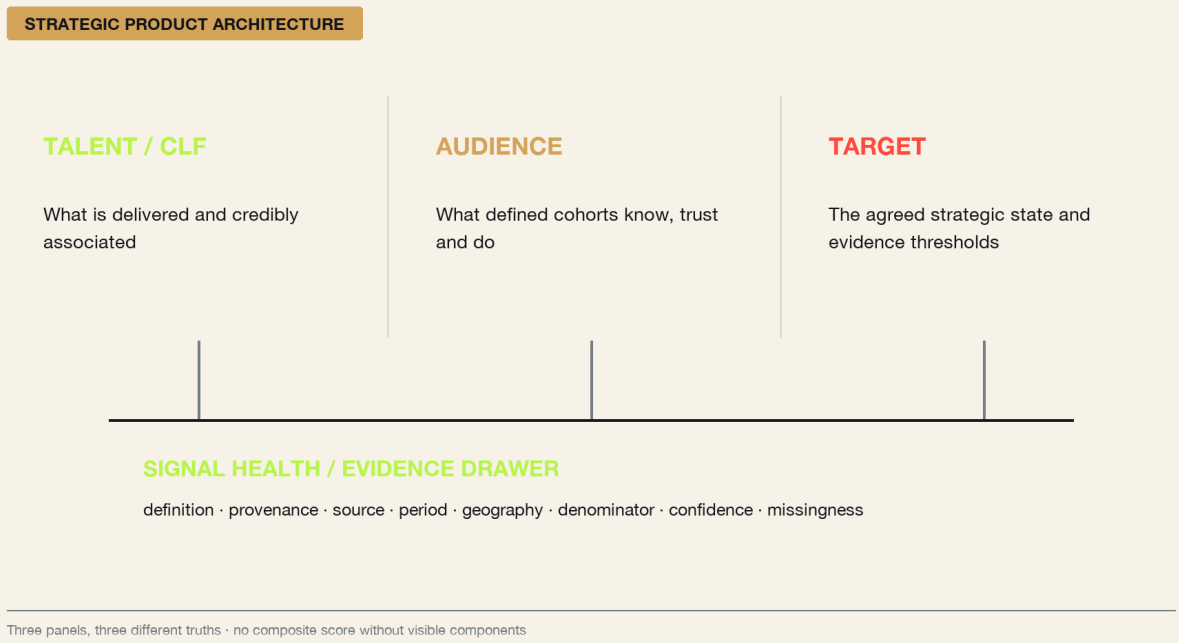

FIGURE / RMU dashboard contract: Talent / CLF, Audience and Target with visible signal provenance.

Three panels, three different truths

Talent / CLF position

What is delivered, what Rihanna is credibly associated with, how coherent the narrative is and where the evidence is strong or weak.

Audience position

What defined audience cohorts know, believe, trust and do. Followers and engagement are not proxies for comprehension.

Target position

The agreed strategic state, programme targets and evidence thresholds.

Signal Health drawer

Every metric opens to show:

- definition;
- provenance label;
- owner;
- source and direct link;
- date range and refresh cadence;
- geography and population;
- numerator and denominator;
- confidence;

- known bias or missingness;
- whether observed, reported, self-reported, inferred or modelled.

Red-line rules

- no composite score without visible components and weights;
- no global claim from one platform;
- no sentiment score without human validation on a multilingual sample;
- no audience "position" without a defined sample frame;
- no causal uplift claim without a suitable design;
- no replacement of an earlier result when the methodology changes—show a break in series.

STRATEGIC IMPACT REPORT

17 / DATA ACCESS DECISION

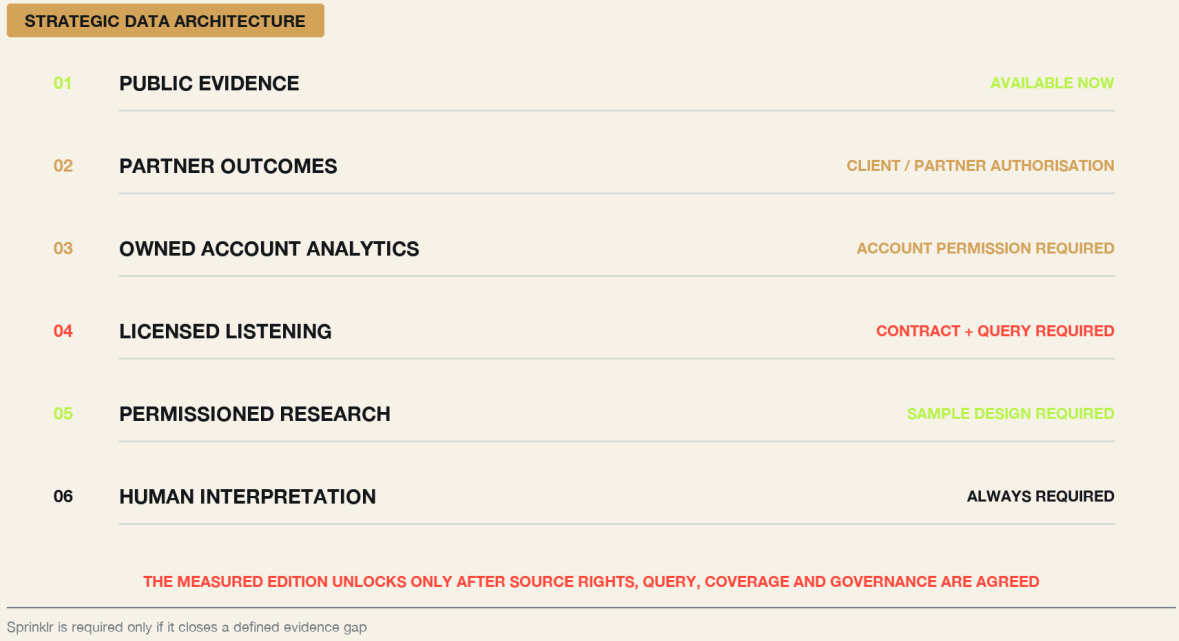

FIGURE / Data architecture from public evidence to authorised research and interpretation.

Can the founding report be completed without Sprinklr?

Yes. The strategic diagnosis, CLF evidence review, comparator analysis, theory of change, programme architecture, KPI system and data-acquisition plan do not require Sprinklr.

Can the final audience score be defended without new data?

No. A defensible global audience position, share of voice, sentiment shift or conversation-quality trend requires authorised first-party data, licensed listening and/or primary research.

Sprinklr

Decision

Do not purchase it merely to complete this public-evidence edition. Procure a scoped enterprise demonstration or agency-supported listening pilot after the query, markets, languages, historical window and outputs are defined.

Sprinklr markets listening across 30+ social and digital channels and firehose access for 10+; actual coverage, retention and export rights are source- and contract-specific. Its former self-serve products were discontinued, with existing self-serve service ending 30 April 2026. This review found no publicly advertised low-cost tier; the current public route is a personalised enterprise demonstration. Sprinklr Social Listening; Sprinklr demo and self-serve notice

Use it for

- cross-channel query management;
- historical and ongoing topic volume;
- source, geography and language segmentation where available;
- competitor benchmarking;
- exportable content samples for human coding;
- repeatable dashboards and alerts.

Do not use it as

- a representative survey of Rihanna fans;
- automatic proof of meaning or justice;
- an unquestioned sentiment oracle;
- a substitute for owned account analytics or partner outcome data.

Meta / Instagram

Decision

Start with authorised exports from the relevant professional accounts. Add API access if recurring dashboard refresh justifies the engineering and app-review work.

Meta's official Instagram API materials describe insights for professional accounts and media owned by authorised app users. User Metrics are stored for up to 90 days, and media insights cover media owned by authorised professional accounts. The API is therefore valuable for Rihanna/CLF/Fenty-owned professional accounts, not a public Instagram firehose. Meta's official Instagram Postman collection: Insights

Reddit

Decision

Do not scrape Reddit or treat free Data API access as available for a commercial client report. Use a provider contract that explicitly covers commercial Reddit collection, retention and export, or seek Reddit's written commercial permission and contract.

Reddit's current policy states that commercial use—including paid research or services on behalf of a business—requires permission and a contract. API access requires approval and OAuth; free access limits do not create commercial rights. Reddit Developer Platform and Accessing Reddit Data; Reddit Data API Wiki

Permission-based survey

A permission-based survey is required for comprehension, trust, identity fit and action intent. SurveyBot is one possible collection channel; representativeness depends on recruitment, quotas, weighting and minimum base sizes,

not the tool. The design also requires a privacy notice, consent and clear separation from customer-service or promotional messages.

STRATEGIC IMPACT REPORT

18 / RESEARCH DESIGN

The measured edition requires a staged research programme in which each method answers a different question. Public evidence establishes delivery credibility and the issue system. Owned analytics describe activity on authorised accounts. Licensed listening estimates defined public conversation within known source limits. Primary research tests awareness, comprehension, trust and action. Partner evidence addresses programme outcomes and community power. Analyst interpretation connects those lanes without pretending that any one of them represents the whole audience.

Stakeholder validation panel

Before a measured strategy is approved, the research should be tested with at least ten distinct stakeholder perspectives: CLF executive leadership; programme and grantmaking teams; Caribbean delivery partners; community or youth representatives; resilience and infrastructure specialists; climate-finance or policy experts; cultural creators; Rihanna's communications team; Fenty or commercial representatives where relevant; and an independent measurement or ethics adviser. This is a proposed validation architecture. No stakeholder interviews were conducted for this public-evidence edition.

The purpose of the panel is not consensus for its own sake. It is to expose where the same proposition carries different risks, where a metric creates burden, where a cultural idea loses meaning and where decision rights are unclear. Findings should record convergence, disagreement and unresolved trade-offs rather than smoothing them into a single institutional voice.

Phase 0 — public-evidence foundation

- CLF documents and project data;
- IRS/public-record review;
- current authoritative climate context;
- owned-platform exports where authorisation is available;
- structured qualitative review of a small, terms-compliant public content sample;
- 6–10 partner and stakeholder interviews;
- an initial permission-based survey pilot.

Output: a provisional baseline with clear missingness. No global audience estimate.

Phase 1 — defensible baseline

- 12–24 months of licensed listening across agreed markets and languages, subject to source-by-source availability, licensed lookback, geography and language coverage;
- a 1,000+ respondent audience study with defined fan/non-fan cohorts;
- message experiment for 3–4 territories;
- human-coded multilingual quality-of-conversation sample;
- reconciliation with owned account analytics;
- project-level resilience and justice baselines.

Output: calibrated Talent/Audience/Target scorecard with uncertainty.

Phase 2 — ongoing measurement

- monthly listening and owned-channel refresh;
- quarterly pulse survey;
- partner outcome reporting on a proportionate cadence;
- pre/post and exposed/comparison design where feasible;
- annual independent review of selected impact measures;
- public year-end accountability report.

Minimum audience questions

1. What causes, if any, do you associate with Rihanna?
2. Before today, had you heard of CLF's climate work?
3. In your own words, what does climate justice mean?
4. Which CLF proof story is most relevant and why?
5. How credible is Rihanna speaking about this issue, and what drives that view?
6. Which action would you realistically take now?
7. What evidence would make you trust the programme more?
8. Would you act again if you received a verified partner update?

STRATEGIC IMPACT REPORT

19 / DIGITAL-TWIN STRATEGY TESTING

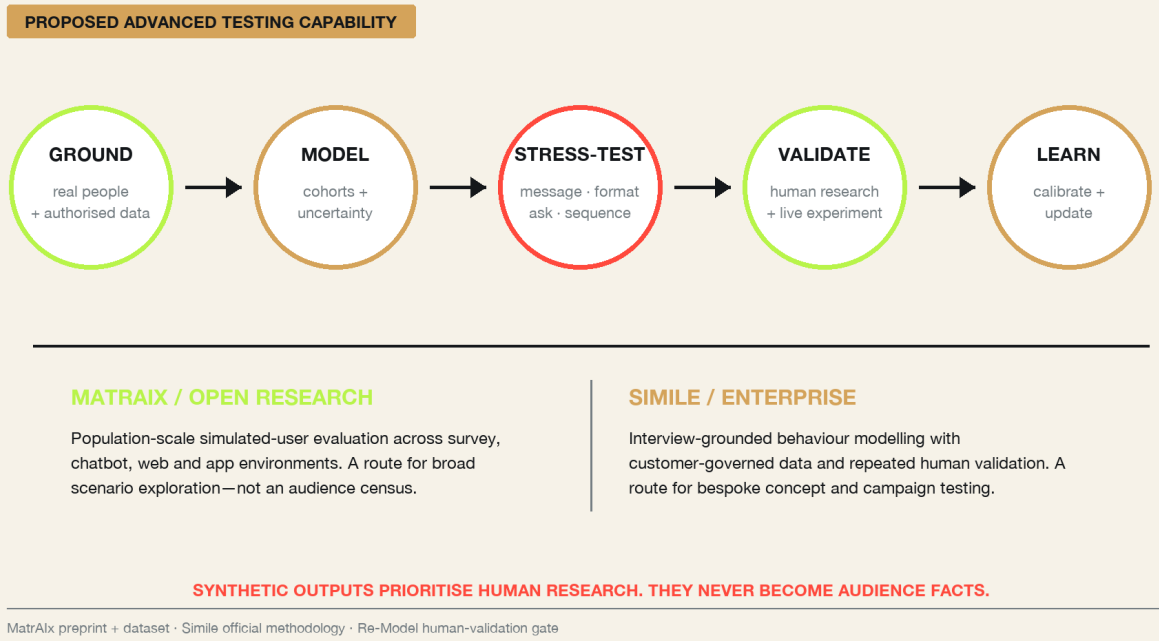

FIGURE / Human-validated digital-twin loop for pre-testing strategy and content.

Test the strategy before it spends cultural capital

Re-Model proposes a human-validated digital-twin layer between desk research and live activation. The purpose is not to manufacture audience truth. It is to expose weak assumptions, compare content and strategy variants consistently, and decide what is worth advancing to real people.

The five-gate loop

1. **GROUND** — define the decision, population and relevant evidence using authorised analytics, permissioned research, partner knowledge and public context.
2. **MODEL** — build or select cohorts by relevant attributes such as age, geography, life stage, values and psychographics, subject to rights, ethics, sufficiency and bias review.
3. **STRESS-TEST** — hold the cohort constant while varying message, spokesperson, visual, format, call-to-action, sequencing and frequency.
4. **VALIDATE** — take leading variants and predicted failure modes into representative human research, partner review and limited live experiments.
5. **LEARN** — compare prediction with observation, disclose uncertainty and update or reject the model.

MatrAIx route — open research infrastructure

MatrAIx describes itself as population-scale simulated-user evaluation for AI systems and digital products across survey, chatbot, web and app environments. Its 2026 preprint reports 8.3 billion persona records across 1,290 dimensions, a public coreset of approximately one million personas and 91.5% declared-behaviour adherence in a 400-trial validation study. The public dataset card also states that the coreset is not representative of any population and contains both human-grounded and synthetic records. MatrAIx paper; MatrAIx Persona 1M

The work is organised by a large research collaboration whose corresponding organisers use Harvard and MIT affiliations. It should be described as **Harvard- and MIT-affiliated research**, not as an official Harvard or MIT product.

Simile route — bespoke enterprise simulation

Simile is a separate Stanford-founded company built on generative-agent and interview-grounded population-simulation research. Its official methodology says populations begin with real people, may incorporate opt-in customer-governed behavioural and transactional data, and are repeatedly validated against human responses. Those operating and customer claims are vendor-reported and require procurement and diligence. Simile methodology; Generative Agent Simulations of 1,000 People

Strategy and content tests

- comprehension of climate-justice language;
- authenticity and role fit across Rihanna, CLF and partners;
- relative appeal of proof stories, formats and calls to action;
- confusion, backlash, cause-washing and community-eclipse risks;
- action-ladder fit by market and cohort;
- frequency, sequencing and attention-decay scenarios;
- robustness of the Commercial-to-Climate Pipeline before real-world investment.

Non-negotiable boundary

Digital twins are decision-support systems. They do not replace representative people, partner consent, lived experience or real-world validation. Re-Model should never publish simulated outputs as Rihanna audience measurements, train on private fan or client data without rights, or use synthetic personas to infer sensitive traits. Every study should disclose population, source, model, calibration, uncertainty, decision rule and validation date.

STRATEGIC IMPACT REPORT

20 / RISK AND GUARDRAILS

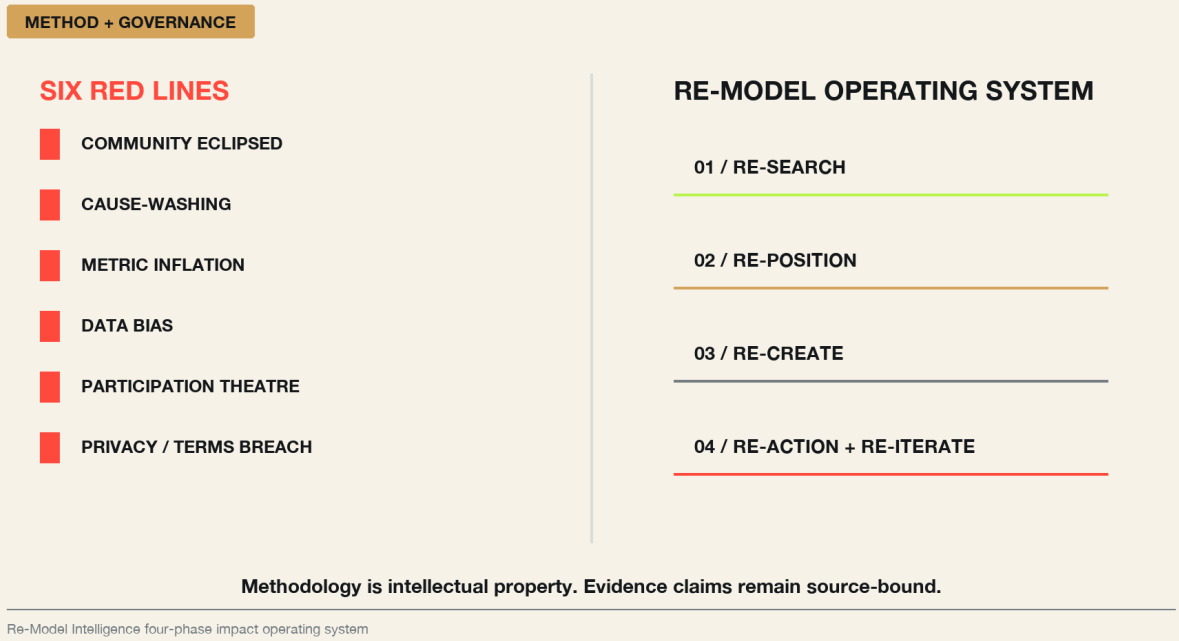

FIGURE / Re-Model methodology and the six credibility red lines.

Risk	Trigger	Guardrail
Celebrity eclipses community	Rihanna appears as rescuer or sole actor	partner voice, consent and authorship lead
Cause-washing	commercial product claim exceeds evidence	audited boundary; no implied footprint claim
Disaster spectacle	trauma becomes the primary creative currency	everyday resilience, dignity and future-building
Metric inflation	reach, pledges or aggregate “lives” become impact	separate output, outcome and impact; disclose method
Data bias	social sample presented as “the audience”	source-specific labels; survey baseline; missingness
Sentiment error	multilingual or coded nuance is flattened	human validation and language expertise
Participation theatre	fans click but power does not shift	meaningful actions and locally governed resources
Partner burden	small organisations carry excessive reporting load	proportionate indicators, funding for data capacity
Founder inconsistency	episodic posts without follow-through	a low-frequency, high-proof, year-long voice cadence
Privacy and terms breach	scraping or re-use beyond platform rights	authorised exports, contracts, consent and minimisation

21 / FIRST 90 DAYS

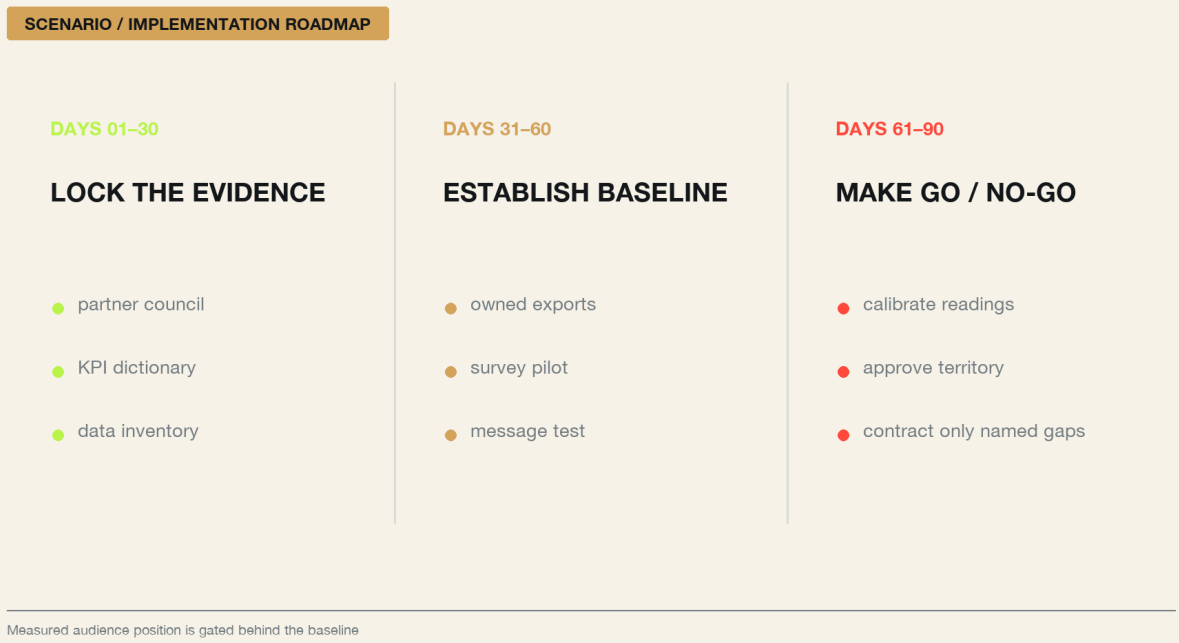

FIGURE / Ninety-day sequence from evidence governance to go/no-go decisions.

Days 1–30 — lock the evidence

- appoint CLF sponsor and partner advisory group;
- approve evidence labels and red-line rules;
- inventory project, grant, partner, story and owned-channel data;
- define the climate-justice audience and comparator set;
- issue a tightly scoped social-listening request for proposal or Sprinklr demonstration brief;
- choose three proof stories and secure consent.

Days 31–60 — establish the baseline

- export authorised owned-channel data;
- run qualitative comment coding;
- field the audience survey pilot;
- conduct partner and stakeholder interviews;
- establish project baselines for service continuity and community power;
- test four message territories.

Days 61–90 — make the go/no-go decisions

- calibrate Talent/Audience/Target readings;
- approve the Rebuild & Reimagine territory or select an alternative;
- define the action ladder and partner ownership model;
- commission the evidence hub and content system;

- contract data access only where it closes a named evidence gap;
- publish the Year One measurement and governance charter.

Day-90 deliverables

- verified scorecard baseline;
- audience segmentation and comprehension map;
- message test results;
- partner-approved theory of change;
- annual programme calendar;
- KPI dictionary and data contracts;
- halo-event decision;
- risk register and go/no-go gates.

STRATEGIC IMPACT REPORT

22 / THE RE-MODEL IMPACT OPERATING SYSTEM

The report defines the strategic contract. The dashboard keeps it alive.

The Re-Model methodology is not a sequence of disconnected deliverables. It is a learning system. **RE-SEARCH** establishes the evidence and the boundaries of what can be claimed. **RE-POSITION** converts that evidence into a distinctive role, a target state and a scorecard. **RE-CREATE** translates the position into partnerships, content, commerce and participation. **RE-ACTION ✦ RE-ITERATE** measures what changed, exposes weak assumptions and determines the next cycle.

For Rihanna and CLF, that system prevents two common failures. The first is a compelling cultural campaign detached from programme truth. The second is strong delivery evidence that never becomes understandable or actionable to a wider public. The report connects the two by making each recommendation answerable to a source, a decision owner, a causal assumption and a future metric.

How the report connects to Talent / Audience / Target

Intelligence layer	What this report establishes	What the dashboard monitors	Decision enabled
Talent / CLF	delivery credibility, founder–cause authenticity, narrative strengths and weaknesses	evidence freshness, proof coverage, narrative coherence and public association	what Rihanna and CLF can credibly lead or claim
Audience	the hypotheses, cohorts, questions and research design required for a baseline	awareness, comprehension, trust, action, return and segment differences	which message, format and pathway should be advanced or changed
Target	the desired position, impact thresholds and guardrails	distance to the approved state, confidence and evidence gaps	whether the strategy is progressing or merely generating activity

The annual intelligence rhythm

The dashboard should not become a real-time theatre of fluctuating sentiment. Climate-justice strategy requires different cadences for different evidence. Owned-channel and listening signals may refresh monthly. Audience comprehension and trust are better read through quarterly pulse research. Infrastructure and partner outcomes should follow the reporting rhythm that is proportionate and useful to delivery organisations. Strategic interpretation belongs in a quarterly analyst review, while the annual accountability publication reconciles results, limitations and next-cycle decisions.

Every dashboard value therefore carries a signal-health record: definition, provenance, owner, source, period, geography, population, denominator, confidence and missingness. If any of those elements fail, the visual should degrade visibly rather than present false precision. This makes the dashboard a governance interface as much as a communications product.

The Re-Model value chain

Evidence → position → cultural expression → participation → observed result → interpretation → redesign

The value is not the volume of graphics or the frequency of reporting. It is the disciplined conversion of diverse signals into a smaller number of defensible decisions: what to say, who should say it, what action to ask for, which partner should own it, what evidence is sufficient and when to stop or change course.

STRATEGIC IMPACT REPORT

23 / DECISIONS REQUIRED

1. Confirm that climate justice is the umbrella cause and community-led Caribbean resilience is the distinctive territory.
2. Decide whether to build on **Rebuild & Reimagine** as the public platform name.
3. Approve the rule that community partners retain story consent and programme decision power.
4. Approve a research baseline before displaying a measured audience score.
5. Decide which Rihanna/CLF/Fenty owned accounts can provide authorised analytics.
6. Define the markets, languages, platforms and comparator set for a licensed listening pilot.
7. Approve the three hero proof stories.
8. Decide whether Fenty participation is philanthropic only or includes a separately audited cause-to-commerce mechanism.
9. Appoint an independent measurement partner for selected resilience indicators.
10. Choose the Year One halo moment, location and decision-maker audience.

STRATEGIC IMPACT REPORT

24 / METHOD

How the report was built

The analytical structure follows Re-Model Intelligence's four-phase impact operating system:

1. **RE-SEARCH** — commercial, customer and social evidence; publishable and internal outputs.

2. **RE-POSITION** — unique position, message system, partner map and customised scorecard.
3. **RE-CREATE** — always-on content, partnerships and annual halo moment.
4. **RE-ACTION ✦ RE-ITERATE** — scorecard, dashboard, learning and extension.

The four-phase process governs how evidence becomes position, activation and accountable learning. The RMU dashboard is the living implementation layer; its current display values are explicitly illustrative until the baseline, components and weights are approved.

Research hierarchy

Priority was given to:

1. CLF's current reports and programme pages;
2. public financial records;
3. authoritative multilateral climate and resilience sources;
4. peer-reviewed celebrity-advocacy research;
5. official comparator impact reports;
6. current official platform and vendor access policies.

Limitations

- No private data or interviews were available.
- CLF programme results are reported by CLF unless otherwise stated.
- The public evidence review does not constitute audit or assurance.
- Social and search observations are not a representative audience baseline.
- The strategy is a recommendation requiring partner and client validation.
- Platform and vendor access terms can change; procurement should re-check them.

STRATEGIC IMPACT REPORT

Digital-twin research and platforms

- MatrAIx: Simulating the World with 8.3 Billion Persona Agents (2026 research preprint; Harvard- and MIT-affiliated organisers)
- MatrAIx Persona 1M public release (open research dataset; explicit representativeness limitations)
- Simile methodology and validation (vendor-reported)
- Generative Agent Simulations of 1,000 People (2024 research preprint)
- Reddit Data API Wiki

STRATEGIC IMPACT REPORT

26 / CLAIM LEDGER

Claim	Status	Source class	Use
CLF deployed >$27M to 39 climate-resilience partners, 2021–2025	Verified as reported	CLF current annual report	executive proof
CLF climate-solutions reach is 2.8M and investment $20.6M	Verified as reported	CLF current programme page	scale proof
CLF 2025 portfolio invested $4.8M across 38 grantees and reached 5.2M	Verified as reported	CLF current annual report	organisational scale
CLF reports eight major infrastructure upgrades over five years	Verified as reported	CLF current climate-solutions page	resilience model
CLF reports 35% of selected Fenty product sales goes directly to CLF	Verified as reported	CLF current homepage	existing cause-to-commerce proof; mechanism details needed
Grantees leveraged $7.25 per $1 CLF invested	Verified as reported	CLF current annual report	capital mobilisation; method needed
Mobile clinic designed for 101,000 residents and increased reach >25%	Verified as reported	CLF current annual report	hero proof story
FY2024 revenue $24.0M; expenses $6.6M; net assets $65.0M	Corroborated	IRS-derived ProPublica record	institutional capacity
$15M to 18 grassroots climate-justice organisations in 2022	Corroborated	Global Citizen + CLF release	justice lineage
185 Caribbean SIDS cyclone disasters, 1995–2022; $45B damage	Verified	World Bank / EM-DAT synthesis	need context
Caribbean natural-hazard damage estimated $12.6B/year	Verified	UNCTAD via UN Caribbean	finance gap
Beryl damage >20% of SVG GDP	Verified	World Bank	scale of shock
Billie Eilish tour: $13.3M raised and 215,117 fan actions	Verified as partner-reported	REVERB	comparator
Coldplay: 59% lower direct emissions per show vs prior tour	Verified as artist-reported with external review	Coldplay / Hope Solutions / MIT ESI	comparator
Global Citizen 2025: 4.3M actions	Verified as organisation-reported	Global Citizen	comparator
Celebrity + information reduced single-use plastics ~29% in one experiment	Peer-reviewed contextual finding	journal article	action design rationale
Rihanna audience climate awareness and action	Unmeasured	requires survey/listening	no current score
77/86/97 dashboard scores	Simulated / example only	existing interface	product demonstration only
95:5, 12× and 92% attention demonstrations	Simulated / example only	synthetic strategic exploration	visualise only inside a persistent simulation frame; never cite as findings
